

COMMUNICATION PROTOCOL

e10-V6

www.sic-marking.com

CONTENTS

I - COMMUNICATION PROTOCOL	6
1 - GENERAL INFORMATION.....	6
2 - TEXT PROTOCOL	7
a) String to be sent:	7
b) Response of the control	7
c) Commun fuctions.....	7
• LOADFILE load a marking file	7
• SETVAR set a variable or an increment to the current file.....	7
• RUN start the marking	7
• RESETERROR if an error occurse, you need to clear the machine status.	8
d) managing files functions.....	8
• NEWFILE create a new marking file.....	8
• SETFILEOPTION set diameter for D-AXIS system	9
• INSERTTEXTLINE insert a line to the current file	9
• INSERTPAUSELINE insert a line to the current file	9
• INSERTLOGOLINE insert a logo to the current file	9
• INSERTECC200LINE insert a Data matrix to the current file	10
• INSERTAUTOZLINE make an auto-sensing in current file	10
• INSERTMOVEZLINE insert a line to the current file	10
• INSERTROTATIONLINE insert a line to the current file	11
• SETLINEOPTION Set options for the last inserted line of the current file	11
• SAVEFILE save current file	12
• FILEDELETE erase a file into the control	12
e) manual programming functions.....	12
• HOMEPOSITION go to home position	12
• IMPACT Impact or srcatching	13
f) settings functions.....	13
• SETSHIFTINCVAR setting settting a shift increment to the current file	13
• SETGLOBALVAR Affectation variable globale	13
• SETGLOBALINC Affectation incrément globale	13
• GETVERSION get the program version	14
• GETDATETIME getting the date and the time	14
• SETDATETIME setting the date and the time	14
3 - BINARY PROTOCOL.....	15
a) String to be sent :	15
b) The control response to all commands:.....	15
c) Commands list :	16
d) Commun functions :	16
• LOAD FILE Code 'c' (0x63 in hexadecimal)	16
• FILE SET VAR Code '7' (0x37 in hexadecimal)	17
• START MARKING Code 'g' (0x67 in hexadecimal)	17
• RESET_ERREUR Code 'E' (0x45 in hexadecimal)	17
e) managing files functions.....	17
• NEW_FILE Code 'f' (0x66 in hexadecimal)	17
• INSERT_LINE_TO_FILE Code 'l' (0x6C in hexadecimal)	18
• FILE_SET_OPTION Code 'o' (0x6F in hexadecimal) Marking file Option	19
• LINE_SET_OPTION Code 'a' (0x61 in hexadecimal) last line of marking file Option	19
• SAVE_FILE Code 'e' (0x65 in hexadecimal)	19
• FILE_LIST Code 'L' (0x4C in hexadecimal)	19
• PC_TO_E6 Code 'G' (0x47 in hexadecimal)	20
• E6_TO_PC Code 'S' (0x53 in hexadecimal)	21
• DEL_FILE Code 'D' (0x44 in hexadecimal)	21
f) File options definition:	22
• Diameter Option Setting the part diameter (for the D-Axis use only)	22
• Comment Option Setting the file comment (free text)	22
g) Last marking file line option description :	22
• Attribut option Pritable setting	22
• Indexor Option D-axis setting	22
h) Manual programming.....	23
• ORIGIN Code 'H' (0x48 in hexadecimal).....	23
• IMPACT Code 'P' (0x50 in hexadecimal).....	23
• SET_OUPUT Code 'Z' (0x5A in hexadecimal)	23

• GET_INPUTS Code 'Y' (0x59 in hexadecimal)	23
i) Settings functions	23
• RESTART Code '*' (0x2A in hexadecimal)	23
• SYNCHRO_DATEHEURE Code 'h' (0x68 in hexadecimal)	24
• VITESSE_COM Code 'v' (0x76 in hexadecimal)	24
• SET_VAR_GLOBALE Code '8' (0x38 in hexadecimal)	24
• SET_INC_GLOBALE Code '9' (0x39 in hexadecimal)	24
• SET_SHIFT_INC_FICHER Code '0' (0x30 in hexadecimal)	25
• GET_OPTION Code '1' (0x31 in hexadecimal) Control Option	25
• SET_OPTION Code '2' (0x32 in hexadecimal) Control Option	25
• DEL_OPTION Code '3' (0x33 in hexadecimal) Control Option	25
• RELOAD_CONFIG Code 128 (0x80 in hexadecimal) Reload machine configuration	25
• GET_MACHINE Code 129 (0x81 in hexadecimal)	25
j) Examples of Machine configuration.....	25
• Set a p62 system	25
• Set a c151 system with a standard 50mm Znum axie	26
• Set a i111s system with lost step control and no 3 rd axis	26
k) Control option definition:	26
• LANGUAGE Option Language	26
• Option FICHER File to open at boot time	26
• Option VALUE PAR DEFAUT Default values editing fichiers	26
• KEYBOARD Option Keyboard setting	27
• STATISTICS Option Controls Statistics	27
• MACHINE_NAME Option machine name (C150, I80, ...) caution : letters must be in upper case	27
• MACHINE_ACCESSORY Option 3 rd axie configuration	28
• MACHINE_ADVANCED Option advanced configuration of the system (IO config, axes priority, ...) ..	28
• SHIFT Option Shift setting	29
• GLOBALES VAR Option setting the global variables	29
• GLOBALES INC Option setting the global increments	29
• ALPHA INC BASE Option Setting the alphanumeric increment rules	29
• UNIT Option metric or inch system	30
4 - COMPATIBILITY WITH THE COMMUNICATION PROTOCOL OF THE 4A VERSION PROGRAM	30
a) Communication protocol:	30
b) String to be sent:	30
c) List of functions:	30
d) Exemples de communication :	31
II - SLAVE MODE – COMMUNICATION PROTOCOL – INPUT / OUTPUT	35
1 - SERIAL COMMUNICATION.....	35
a) TEXT format of the communication protocol.....	35
• String format to be sent:	35
• Response of the system	35
• Commun functions	35
• Examples	35
b) V4 protocol.....	36
• Communication protocol	36
• String to be sent :	36
• List of functions	36
• Examples	36
c) ASCII Codes:	37
d) Code sent back from the system (protocol v4 and v5).....	38
e) Error codes returning on a marking error	39
f) Description of the serial ports.....	40
• "HOST"	40
• "SERIAL"	40
g) RS232 test.....	41
2 - TOR INPUTS / OUTPUTS	41
a) Cabling	41
b) Electric limit.....	42
• Dry contact output (relays)	42
• Output 4 (transistor)	42
• Inputs	42
c) File selection	42
d) Input/Output test.....	43
e) Operating timing diagram	43
• Wiring of the pneumatic Z-axis	45

- Use of the I/O with the clamping of a part being marked, and default announced by a light. ... 45

III - CONFIGURATION OF THE COMMUNICATION PORT (OPTIONAL BOARDS): 47

Important note: The use of an optional communication boards on the e10 controller disable the RS232 port. 47

- a) Ethernet..... 47*
- b) Profibus..... 48*
- c) Profinet and Ethernet/IP 48*

IV - FIELDBUS PROTOCOLS 50

- a) Prerequisite 50*
- b) Integration..... 50*
- c) Procedure required..... 51*
- d) Example 1..... 51*
- e) Example 2..... 51*
- f) Example 3,..... 52*

I - COMMUNICATION PROTOCOL

1 - General information

Guide conventions:

The following typographical conventions are used throughout this manual.

Text in [] is a data, it is written with one byte

Text in [...(n byte)] is a data, it is written with n bytes

Text in <> is a group of data

A char in " is written as itself, for example, '1' is the 49 ASCII code, 'A' is the 65 ASCII code.

Examples:

[0x41] is the 65 ASCII code (in decimal base), which is the letter **A**

[0x42] is the ASCII code 42 in hexadecimal base, which is the letter **B**

[ETX] is ASCII code ETX (0x02 in hexadecimal base)

2 communications protocols are possibles:

- TEXT protocol: all data are printable char
 - easy to read
 - it is not possible to transfer every kind of data
 - the string to be transferred is longer
 - ideal for automatism who have trouble sending binary code.
- BINARY Protocol: data are compact and written using the full ASCII table
 - > no limits for the data
 - > the string to be transferred is compact (fast communication)
 - > data are coded, it is not easily readable
- the string to be transferred cannot be longer than 40 000 bytes
- Buffer memory is 500 bytes: do not send more than 500 byte too fast else data will be lost.

Peticular case : the string which run the marking file:

As soon as the control receive the string, it send the [ACK] code then start the marking file

At the last dot marked, the control send [EOT]

At the end of the cycle, and at home position, the control send [ENQ]

On error, the control send [NAK][ERROR-CODE(3)]

When an error occurs, you must acknowledge the message by sending the RESET ERREUR string

Remark: For historical compatibility, you can use the communication protocol of 4A version (see the end of document)

2 - Text Protocol

a) String to be sent:

`<command> [Space char] <Data> [Space char] ... [Space char] <Data> [CR][LF]`
or `<command> [CR][LF]`

where

<code><Command></code>	is the command code
<code><Data></code>	is the data of the command (without Space char)
<code>[CR]</code>	is the 0x0D char (obsolete)
<code>[LF]</code>	is the 0x0A char

b) Response of the control

`<command> [Space char] <Answer> [CR][LF]`

the control response to evry command.

c) Commun fuctions

These functions let you select a marking file in the controller, affect variables and run the marking cycle.

• **LOADFILE** *load a marking file*

Syntaxe :

`LOADFILE <File name> [CR] [LF]`

Answer :

<code>LOADFILE OK[CR] [LF]</code>	→ OK
<code>LOADFILE ERROR [CR] [LF]</code>	→ file not found

Data :

File name 11 char max, in upper case

Example :

String to send :

`LOADFILE MYFILE[LF]`

String received:

<code>LOADFILE OK[CR] [LF]</code>	→ the file MYFILE is loaded
<code>LOADFILE ERROR[CR] [LF]</code>	→ the file MYFILE is not found

• **SETVAR** *set a variable or an increment to the current file*

Syntaxe :

`SETVAR <Var name> <Value> [CR] [LF]`

Answer :

<code>SETVAR OK[CR] [LF]</code>	→ OK
<code>SETVAR VAR NOT FOUND [CR] [LF]</code>	→ variable introuvable

Data :

Var name	in upper case
Value	free printable text

Example :

String to send : setting the value 53H805 to the var named OF

`SETVAR OF 53H805[LF]`

String received:

`SETVAR OK[CR] [LF]`

• **RUN** *start the marking*

Syntaxe :

RUN <Simulation>

Answer :

RUN OK[CR] [LF]	→ start of marking
[EOT]	→ last dot marked
[ENQ]	→ back to home position
[NAK] [Err1] [Err2] [Err3]	→ if an error occurse

Data :

Simulation (optionnal)
Marking at force 0 if "Simulation", else marking at normal force
Erri if an error occurse, see fig 1 on annexe

Note :

If there is PAUSE in the marking file :
At a PAUSE line, the control send the char P [0x50] and wait for :
- response p [0x70] from RS232,
- or the Start button to be pressed,
to continue the marking,

Example :

Start marking
String to send :
RUN [LF]
String received:
RUN OK[CR] [LF] → start of marking
[EOT] → last dot marked
[NAK] [0x00] [0x88] [0x00] → Error : 88 = 80 + 8 = Z axis + Error Sensor : Z axis is not at home position

Start a simulation
String to send :
RUN SIMULATION [LF]
String received:
RUN OK[CR] [LF] → start of marking
[EOT] → last dot marked
[ENQ] → End of simulation OK

- **RESETERROR** if an error occurse, you need to clear the machine status.

Syntaxe :

RESETERROR [CR] [LF]

Answer :

RESETERROR OK[CR] [LF]

d) managing files functions

With these functions, you will be able to transfer all marking parameters :

First, create a free file using NEWFILE command, then insert the line with the INSERT*LINE function, then you can save the file for a later use with the SAVEFILE command or run the cycle with the RUN command.

- **NEWFILE** create a new marking file

Syntaxe :

NEWFILE <Marking speed> <Fast speed> <Crossed zero> <File name> [CR] [LF]

Answer :

NEWFILE OK[CR] [LF]	→ OK
NEWFILE BAD ARGUMENTS [CR] [LF]	→ errors in parameters

Data :

Marking speed from 1 to 9
Fast speed from 1 to 9
Crossed zero 0 for zero not crossed, 1 for crossed zero
File name (optional) 11 char max, in upper case

Example :

String to send :
NEWFILE 5 7 0 MYFILE[LF]
String received:

NEWFILE OK[CR] [LF]

• **SETFILEOPTION** *set diameter for D-AXIS system*

Syntaxe :

SETFILEOPTION <Diameter> [CR] [LF]

Answer :

SETFILEOPTION OK[CR] [LF] → OK
SETFILEOPTION BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

Diameter the part diameter in 10th of mm

Example : *to set a 21.5 mm diameter*

String to send :
SETFILEOPTION 215[LF]
String received:
SETFILEOPTION OK[CR] [LF]

• **INSERTTEXTLINE** *insert a line to the current file*

Syntaxe :

INSERTTEXTLINE <X> <Y> <Z> <W> <H> <Angle> <Radius> <Space> <Force> <Quality> <Text> [CR] [LF]

Answer :

INSERTTEXTLINE OK[CR] [LF] → OK
INSERTTEXTLINE BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

X, Y, Z Coordonate of the line, in tenth of mm
W, H Width and height of the chars, in tenth of mm
Angle In hundredth of degrees from -18000 to 18000
Radius In tenth of mm
Space space between chars (from 0 to 50)
Force From 0 to 9
Quality From 1 to 9
Text Text to be marked

Example : *Line at X=10mm, Y=12mm, 5x7mm chars at force 5, quality double, text=HELLO WORLD*

String to send :
INSERTTEXTLINE 100 120 0 50 70 0 0 2 5 2 HELLO WORLD[LF]
String received:
INSERTTEXTLINE OK[CR] [LF]

• **INSERTPAUSELINE** *insert a line to the current file*

Syntaxe :

INSERTPAUSELINE <X> <Y> <Z> [CR] [LF]

Answer :

INSERTPAUSELINE OK[CR] [LF] → OK
INSERTPAUSELINE BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

X, Y, Z Coordonate of the line, in tenth of mm

Example : *Line at X=10 mm, Y=12 mm, Z=13 mm*

String to send :
INSERTPAUSELINE 100 120 130[LF]
String received:
INSERTPAUSELINE OK[CR] [LF]

• **INSERTLOGOLINE** *insert a logo to the current file*

Syntaxe :

INSERTLOGOLINE <X> <Y> <Z> <W> <H> <Angle> <Radius> <Prop.> <Force> <Quality> <Type> <Logo> [CR] [LF]

Answer :

INSERTLOGOLINE OK[CR] [LF] → OK
INSERTLOGOLINE BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

X, Y, Z	Coordonate of the line, in tenth of mm
W, H	Width and height of the chars, in tenth of mm
Angle	In hundredth of degrees from -18000 to 18000
Radius	In tenth of mm
Prop.	1 to keep proportion of original logo, 0 to stretch the logo within W and H
Force	From 0 to 9
Quality	From 1 to 9
Type	V for Vectorial ?logo, D for Dot marking logo
Logo	Name of the logo

Example : *Vectorial logo named SIC at X=10mm, Y=12mm, 10x10mm chars at force 5, quality 4, text=HELLO WORLD*

String to send :

```
INSERTLOGOLINE 100 120 0 100 100 0 0 1 5 4 V SIC[LF]
```

String received:

```
INSERTLOGOLINE OK[CR] [LF]
```

• **INSERTTECC200LINE** *insert a Data matrix to the current file*

Syntaxe :

```
INSERTTECC200LINE <X> <Y> <Z> <W> <H> <Angle> <Format> <Force> <Ref> <Speed> <Text> [CR] [LF]
```

Answer :

```
INSERTTECC200LINE OK[CR] [LF] → OK
INSERTTECC200LINE BAD ARGUMENTS [CR] [LF] → errors in parameters
```

Data :

X, Y, Z	Coordonate of the line, in tenth of mm
W, H	Width and height of the chars, in tenth of mm
Angle	In hundredth of degrees from -18000 to 18000
Format	format of the DataMatrix from 0 to 16 : 0 = AutoSquare, 1=AutoRectangular, 2="10x10", 3="12x12", 4="14x14", 5="16x16", 6="18x18", 7="20x20", 8="22x22", 9="24x24", 10="26x26", 11=" 8x18", 12=" 8x32", 13="12x26", 14="12x36", 15="16x36", 16="16x48"
Force	From 0 to 9
Ref	0 for simple reference, 1 for double reference
Speed	From 1 to 9
Text	Text to be marked

Example : *Ecc200 at X=15mm, Y=14mm, 10x10mm chars at force 5, Simple reference, speed=3, text to encode=HELLO WORLD*

String to send :

```
INSERTTECC200LINE 150 140 0 100 100 0 0 5 0 3 HELLO WORLD[LF]
```

String received:

```
INSERTTECC200LINE OK[CR] [LF]
```

• **INSERTAUTOZLINE** *make an auto-sensing in current file*

Syntaxe :

```
INSERTAUTOZLINE <X> <Y> <1st dot> <DZ> <Zmin> <Zmax >[CR] [LF]
```

Answer :

```
INSERTAUTOZLINE OK[CR] [LF] → OK
INSERTAUTOZLINE BAD ARGUMENTS [CR] [LF] → errors in parameters
```

Data :

X, Y	Coordonate of the line, in tenth of mm
1st dot	"1" for YES and "0" for NO
DZ	Stylus/Workpiece marking distance, in tenth of mm (from 0mm to 9.9 mm)
Zmin, Zmax	minimum move and maximum move, in tenth of mm

Example : *Auto Sensing at 1st dot with part between 50mm and 60 mm and a Stylus/Workpiece marking distance of 6mm*

String to send :

```
INSERTAUTOZLINE 100 120 1 60 500 600[LF]
```

String received:

```
INSERTAUTOZLINE OK[CR] [LF]
```

Example : running a new file with one AutoZ and marking the text AZERTY

```
NEWFILE 5 7 0[LF]INSERTAUTOZLINE 100 120 1 60 500 600[LF]
INSERTTEXTLINE 100 100 0 50 50 0 0 2 2 AZERTY[LF]RUN[LF]
```

• **INSERTMOVEZLINE** *insert a line to the current file*

Syntaxe :

INSERTMOVEZLINE <X> <Y> <DZ> [CR] [LF]

Answer :

INSERTMOVEZLINE OK[CR] [LF] → OK
INSERTMOVEZLINE BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

X, Y Coordonate of the line, in tenth of mm
DZ relative coordonate from urrent Z position
 A negative value moves the head up
 A positive value moves the head toward the part

Example : *move 10 mm up*

String to send :

INSERTMOVEZLINE 100 100 -100[LF]

String received:

INSERTMOVEZLINE OK[CR] [LF]

• **INSERTROTATIONLINE** *insert a line to the current file*

Syntaxe :

INSERTROTATIONLINE <X> <Y> <Angle> <PASS TO XY>[CR] [LF]

Answer :

INSERTROTATIONLINE OK[CR] [LF] → OK
INSERTROTATIONLINE BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

X, Y Coordonate of the line, in tenth of mm
Angle In hundredth of degrees from -18000 to 18000
Pass to XY 1 : the marking head goes to XY coordonate before executug the rotation,
 0 : the rotation is made without movong the marking head

Example : *rotate of 90 degrees*

String to send :

INSERTROTATIONLINE 0 0 9000 0[LF]

String received:

INSERTROTATIONLINE OK[CR] [LF]

• **SETLINEOPTION** *Set options for the last inserted line of the current file*

Syntaxe :

SETLINEOPTION <FontName>[CR] [LF]
SETLINEOPTION <FontName> <Inclination>[CR] [LF]
SETLINEOPTION <FontName> <Inclination> <Orientation>[CR] [LF]
SETLINEOPTION <FontName> <Inclination> <Orientation> <Mirror>[CR] [LF]
SETLINEOPTION <FontName> <Inclination> <Orientation> <Mirror> <Center>[CR] [LF]
SETLINEOPTION <FontName> <Inclination> <Orientation> <Mirror> <Center> <His>[CR] [LF]
SETLINEOPTION <FontName> <Inclination> <Orientation> <Mirror> <Center> <His> <Speed>[CR] [LF]

Answer :

SETLINEOPTION OK[CR] [LF] → OK
SETLINEOPTION BAD ARGUMENTS [CR] [LF] → errors in parameters

Data :

FontName OCR, OCRA, COURIER, ARIAL
Inclination from -120 to 120
Orientation 0 : **A b c**
 1 : **Ꞥ**
 2 : **ꞤꞤꞤꞤ**
 3 : **ꞤꞤ**
Mirror 0 : **A b c**
 1 : **ꞤꞤꞤꞤ**
 2 : **ꞤꞤꞤꞤ**
Center 0 : No
 1 : Yes
His 0 : No
 1 : Yes
Speed from 1 to 9

Example : *ARIAL + Center*

String to send :

```

SETLINEOPTION ARIAL 0 0 0 1[LF]
String received:
SETLINEOPTION OK[CR] [LF]

```

• **SAVEFILE** *save current file*

Syntaxe :

```
SAVEFILE <File name> [CR] [LF]
```

Answer :

```

SAVEFILE OK[CR] [LF]           → OK
SAVEFILE BAD ARGUMENTS [CR] [LF] → errors in parameters

```

Data :

File name (optional) 11 char max, in upper case

Example :

```

String to send :
SAVEFILE MYFILE[LF]
String received:
SAVEFILE OK[CR] [LF]

```

• **FILEDELETE** *erase a file into the control*

Syntaxe :

```
FILEDELETE <File name> <File kind>
```

Data :

File name File name to delete in upper case, up to 11 chars
File kind : 2 = for a marking file
 4 = for a dot logo
 5 = for a vectorial logo

Example : *deleting file named : MYFILE*

```

String to send :
FILEDELETE MYFILE 2[LF]
String received:
FILEDELETE OK[CR] [LF]

```

e) manual programming functions

These functions are used to take control of the machine :
 Send the machine to the origine, go to a specified point then shoot the stylus.

• **HOMEPOSITION** *go to home position*

Syntaxe :

```

HOMEPOSITION <Motors>
Answer :
HOMEPOSITION OK[CR] [LF]
HOMEPOSITION ERROR <Err1> <Err2> <Err3>[CR] [LF]

```

Data :

Motors (optionnal)
 1 : X motor only 2 : Y motor only
 3 : X et Y motors 4 : Z motor only
 7 : X, Y and Z motors
<Erri> if an error occure, see fig 1 on page 6

Example : *go to home position for XY et Z*

```

String to send :
HOMEPOSITION[CR] [LF]
String received: (error : the Z axis is not at home position)
HOMEPOSITION ERROR 0 136 0[CR] [LF] → error is 136 = 128 + 8 = Error Z axis + Error Sensor

```

After resolving the probleme,clear the error and go back to home position for Z

```

String to send :
RESETERROR[CR] [LF]HOMEPOSITION 4[CR] [LF]
String received:
RESETERROR OK[CR] [LF]
HOMEPOSITION OK[CR] [LF]

```

- **IMPACT**

Impact or scratching

Syntaxe :

IMPACT <Speed> <X> <Y> <Z> <Force> [CR] [LF]

Answer :

IMPACT OK[CR] [LF] → OK
IMPACT ERROR <Err1> <Err2> <Err3>[CR] [LF] → Error

Data :

Speed marking speed : de '1' à '9'
X, Y, Z Coordonate from home position de l'impact en Pas
Force Force of impact : from '0' to '9' (dot marking machine)
Or stylus position : '0' for up, and '1' for down (scratching machine)
Erri if an error occure, see fig 1 on page 6

Example :

String to send :
IMPACT 5 500 500 0 6[LF]

String received:
IMPACT OK[CR] [LF] → OK

String to send :
IMPACT 5 500 -500 0 6[LF]

String received:
IMPACT ERROR 0 80 0[CR] [LF] → error : 80 = 64 + 16 = Y axis error + out of bound error

f) settings functions

These functions let you access to system functions of the controller, as setting the date-time, setting global variables, get the program version.

- **SETSHIFTINCVAR**

setting setting a shift increment to the current file

Syntaxe :

SETSHIFTINCVAR < Increment name > <Shift> < Value >[CR] [LF]

Answer :

SETSHIFTINCVAR OK[CR] [LF] → OK
SETSHIFTINCVAR VAR NOT FOUND [CR] [LF] → not found

Data :

Increment name in upper case
Shift shift number
Value caution, the value is the decimal value of the increment.

Example : *setting the value12 for the first shift to the increment named NB_PART*

String to send :
SETSHIFTINCVAR NB_PART 1 12[LF]

String received:
SETSHIFTINCVAR OK[CR] [LF]

- **SETGLOBALVAR**

Affectation variable globale

Syntaxe :

SETGLOBALVAR <Number> <Value>[CR] [LF]

Answer :

SETGLOBALVAR OK[CR] [LF] → OK

Data :

Number number of the global var (from 1 to 10)
Value Value to set

Example : *setting the first global variable to FACTORY*

Envoie de :
SETGLOBALVAR 1 FACTORY_ONE[LF]

String received:
SETGLOBALVAR OK[CR] [LF]

- **SETGLOBALINC**

Affectation incrément globale

Syntaxe :

SETGLOBALINC <Number> <Value> [CR] [LF]

Answer :

SETGLOBALINC OK [CR] [LF]

→ OK

Data :

Number number of the global increment (from 1 to 10)
Value Value to set

Example : *setting the first global increment to 532*

String to send :

SETGLOBALINC 1 532 [LF]

String received:

SETGLOBALINC OK [CR] [LF]

• **GETVERSION** *get the program version*

Syntaxe :

GETVERSION (No data)

Example :

String to send :

GETVERSION [LF]

String received:

GETVERSION 5-0b4 [CR] [LF]

• **GETDATETIME** *getting the date and the time*

Syntaxe :

GETDATETIME (No data)

Response :

GETDATETIME <Year> <Month> <Day> <Hour> <Minutes> <Seconds>

Year 4 digits

Month, Day, Hour, Minutes, Seconds written with 2 digits, with a zero on the left if necessary

Example : *we are on the 5th of jun 2007 and it is 14h25:30*

String to send :

GETDATETIME [LF]

String received:

GETDATETIME 2007 06 05 14 25 30 [CR] [LF]

• **SETDATETIME** *setting the date and the time*

Syntaxe :

SETDATETIME <Year> <Month> <Day> <Hour> <Minutes> <Seconds>

Data :

Year written with 4 chars

Month, Day, Hour, Minutes, Seconds written with 2 chars, with a zero on the left if necessary

Example : *we are on the 5th of jun 2003 and it is 14h25:30*

String to send :

SETDATETIME 2007 06 05 14 25 30 [LF]

String received:

SETDATETIME OK [CR] [LF]

3 - Binary protocol

a) String to be sent :

There are two format for the string to be send : (a) : with a check sum
(b) : without the check sum

Control code CheckSum : In order to detect a possible error in the transmission, the CheckSum is calculated depending on the string sent by the main system and receptioned by the machine. If the string has been correctly transmitted, the code calculated by the marking machine is the same as the code sent by the main system..

The **CheckSum** corresponds to an "EXCLUSIVE OR" of all codes transmitted in the string, including the STX code and the ETX code.

String (a) : [STX] [NULL] [Version] <Command 1><Command 2>...<Command n> [ETX]
String (b) : [STX] [Version] <Command 1>...<Command n> [ETX] [Check-sum]

Syntax of a Command:

A command is build with :

The command code (written with 1 byte)
The size of the data (a 16-bit integer Written with 2 bytes)
The data (written with n bytes).

The command code can be any value of the ASCII table between [0x04] and [0xFF]
Any byte of data can take any value of the ASCII code

If you do not wish to specify the size of the data, you can format the command using a break-code :

The command code (written with 1 byte)
The ASCII code 255 to specify you are using a break code (written with 1 byte)
The break-code (written with 1 byte)
The data (written with n bytes)

Make sure that the data do not have the break-code inside

format (1) : [Command Code] [data size (2)] [Data (Size)]
format (2) : [Command Code] [0xFF] [Break-code] [Data (Size)] [Break-code]

Conventions :

Green : start and end of the string
Blue : Command code
pink : Data size
Yellow : Data

[STX] and [ETX] = Start and End of text

[NULL] after [STX] disable the check-sum control

[Version] = ' 5 ' (0x35 in hexadecimal) for the protocol version.

[Code] = Command code, written with one byte (from [0x04] to [0xFF])

[Data size(2)] = Size of the data = a 16 bit integer written with 2 bytes, with the most significant byte to the left (Motorola processor)

[0xFF]= char 0xFF for break-code

[Break-code] = any byte from 0x00 to 0xFF

[Data] = data of the command.

Representation of numeric values:

All numbers are written with the most significant byte to the left

Example : the value 513 is written [02] [01]

b) The control response to all commands:

- if an error occurs when the string is analyzed, the control send:

[BS] : for a check-sum error
[HT] : for a bad string syntax
[NAK] : for a Time out

- when the string is correct, the control respond to all commands with the following string.

String sent by control : [STX] <Command 1 answer>< Command 2 answer>...< Command n answer> [ETX]

The command are built : [original command code] [answer size(2 bytes)] [anwer(n bytes)]

In many cases, the anwer is the return code of the execution of the command :

[original command code] [0x00] [0x01] [return code (1 byte)]

the [return code] can be one of the following value

[ACK] successful
[HT] wrong data syntax
[BEL] file not found
[LF] Variable not found

c) Commands list :

- Commun functions :

These functions let you select a marking file in the controller, affect variables and run the marking cycle.

Command name	Command code	description
LOAD FILE	'c'	load a file
FILE SET VAR	'7'	set a var in the current file
START MARKING	'g'	run the marking file
RESET ERREUR	'E'	reset errors

- Managing files functions:

With these functions, you will be able to:

- transfer all marking parameters:

First, create a free file using NEWFILE command, then insert the line with the INSERT*LINE function, then you can save the file for a later use with the SAVEFILE command or run the cycle with the RUN command

- Send and save marking file or logo to the controller:

First, create a free file using NEWFILE command, then insert the line with the INSERT*LINE function, then you can save the file for a later use with the SAVEFILE command or run the cycle with the RUN command

Command name	Command code	Description
NEW_FILE	'f'	new empty file
INSERT_LINE_TO_FILE	'l'	add a line into the current file
FILE_SET_OPTION	'o'	add a option to the current file
LINE_SET_OPTION	'a'	add a option to the last line of the current file
SAVE_FILE	'e'	save a file
LISTE_FAT	'L'	list the files in the control
PC_VERS_E6	'G'	Send a file to the control
E6_VERS_PC	'S'	Get a file from the control
DEL_FILE	'D'	delete a file in the control

- Manual programming functions:

These functions are used to take control of the machine:

Send the machine to the origine, go to a specified point then shoot the stylus, set outputs and read inputs.

Command name	Command code	Description
ORIGINE	'H'	go to home position
IMPACT	'P'	make a impact
SET_OUTPUT	'Z'	Set the value of an output
GET_INPUT	'Y'	get the inputs status

- Settings functions:

These functions let you access to system functions of the controller, as setting the date-time, setting global variables, get the program version, get the machine configuration.

Command name	Command code	Description
RESTART	'*'	restart the control
SYNCHRO_DATEHEURE	'h'	set the control date/time
VITESSE_COM	'v'	change speed of a control communication port
GET_OPTION	'1'	\ } control option management
SET_OPTION	'2'	
DEL_OPTION	'3'	
RELOAD_CONFIG	128	\ } Machine management
GET_MACHINE	129	
GET_CONFIG_MACHINE	130	

- Examples of Machine configuration:

- set a P62 system with no options and and no 3rd axie.
- set a C151 system with no options and a ZNUM axie.
- set a I111s system with lost step control and no 3rd axie.

d) Commun functions :

- LOAD FILE Code 'c' (0x63 in hexadecimal)

Data = [File name (1 to 11 bytes)]

Answer = [Return code (1)]

Example :

Loading file named TEST

[0x02] [0x00] [0x35] [0x63] [0x00] [0x04] TEST [0x03]
a b c d e f g

a = Start of Text [STX]
b = Desable check-sum
c = Protocol version
d = Command code
e = Data size
f = File name
g = End of text [ETX]

• **FILE SET VAR** Code '7' (0x37 in hexadecimal)

Data = [variable name (20 bytes max)] '=' [Value (1 byte to 127 bytes)]

Answer = [Return code (1)]

Variable name : in upcase, cannot be longer then 20 char, cannot include spaces
'=' : char 0x3D in hexadecimal

Value : for a alpha-numeric variable, the value is the text of the var
: for increment variable, the value is a 32-bit integer (the most significant byte to the left)
: for shift variable, the value is 10 32-bit integer (40 bytes)

Example :

Setting an apphanumeric variable named OF with value 524VNP

[0x02] [0x00] [0x35] [0x37] [0xFF] [0x00] OF=524VNP [0x00] [0x03]
a b c d e f g h i

Setting an incrementation named SERIAL_NUM with value 24568

[0x02] [0x00] [0x35] [0x37] [0x00] [0x0F] SERIAL_NUM= [0x00] [0x00] [0x5F] [0xF8] [0x03]
a b c d e' f g i

a = Start of Text [STX]
b = Desable check-sum
c = Protocol version
d = Command code
e' = size
f = Name de la variable
g = value
h = break-code
i = End of text [ETX]

• **START MARKING** Code 'g' (0x67 in hexadecimal)

Data = [mode (0 ou 1)]

Answer = [Return code (1)]

Then if Return code is [ACK]:

[EOT] at end of last impact
[ENQ] when machine back to home position
[NAK] [machine status (3)] when an error occurs during marking

Mode : [0x00] marking, [0x01] simulation (no impact, stylus always up)
if marking mode is empty, then use of normal marking status.

Machine status = see fig 1 page 6

If there is PAUSE in the marking file :

At a PAUSE line, the control send the char P [0x50] and wait for :

- response p [0x70] from RS232,
- or the Start button to be pressed,
to continue the marking,

• **RESET_ERREUR** Code 'E' (0x45 in hexadecimal)

Data = no data

Answer = [Return code (1)]

You must reset the error if the machine status show errors (see fig 1 at the end of the document)

e) managing files functions

• **NEW_FILE** Code 'F' (0x66 in hexadecimal)

Data = [Marking speed (1)] [fast speed (1)] [crossed zero (1)] [File name (0 to 11 bytes)]

Answer = [Return code (1)]

Marking speed : speed from [0x01] to [0x09] (or '1' to '9')
Fast speed : speed from [0x01] to [0x09] (or '1' to '9')
Crossed zero '1', '0', 1, ou 0

File name optional

Example :

New file named MY_FILE, with marking speed 4 fast speed 8 and zero not crossed

[0x02] [0x00] [0x35] [0x66] [0x00] [0x0A] [0x04] [0x08] [0x00] MY_FILE [0x03]
 a b c d e f g h i

new file, with marking speed 6 fast speed 9 and zero crossed

[0x02] [0x00] [0x35] [0x66] [0x00] [0x03] [0x06] [0x09] [0x01] [0x03]
 a b c d e f g i

a = Start of Text [STX] b = Desable check-sum
 c = Protocol version d = Command code
 e = Data size f = speed
 g = crossed zero h = File name
 i = End of text [ETX]

•INSERT_LINE_TO_FILE Code '1' (0x6C in hexadecimal)

Data = [X (2)][Y (2)][Z (2)][W (2)][H (2)][Esp (1)][F (1)][Qua (1)][Kind (1)][Text (0 to 127 bytes)]

Answer = [Return code (1)]

X, Y, Z : a 16-bit signed integer (in thenth of mm)

W, H : a 16-bit signed integer (in thenth of mm)

E : space between char : a 8-bit integer from [0x00] to [100]

F : Force of impact : from [0x00] to [0x09]

Qua : Quality of marking from [0x01] to [0x09]

Kind and Text : See below :

Kind text zone format

[0x00] for Text [Font kind (1)] [Font name (11)] [Reserved (1)] [Text (0 to 114 bytes)]

Font kind = [129] for Font_9x13 (OCR and OCRA), and [131] for Font_TT (COURIER and ARIAL)

Font name = File name of the font written with 11 bytes, padding with NULL char to the right

Reserved = a NULL char

Text = text to print, can include variables, date-time, shift,

[0x01] for Logo [Logo kind (1)] [Prop (1)] [Reserved (1)] [Logo name (11)] [Reserved (1)]

Logo kind = [0x04] for dot logo, and [0x05] for vectorial logo

prop = [0x01] to keep proportion of the logo Width and Height, [0x00] to stretch the logo to W and H

Reserved = a NULL char

Logo name = File name of the logo Written with 11 bytes, padding with NULL char to the right

[0x02] for Ecc200 [Format (1)] [Text (0 to 126 bytes)]

Format = [0x00] Auto-Square, [0x01] Auto-Rectangle

Text = text to print, can include variables, date-time, shift,

[0x03] for RS232 [Port (1)] [Stop] [TimeOut (2 bytes)] [S-Send] [S-Resp] [Send] [Response]

Port = [0x00] for the SERAIL port et [0x01] for the HOST port

Stop = [0x01] Stop marking if timeout is reached before the response is received, [0x00] go to next line after time-out or respose received

TimeOut = in mili-seconds : a 16-bit integer, the most significant byte to the left.

S-Send = size of the text to send : a 8-bit integer

S-Resp = size of the text of the response to wait for: a 8-bit integer

Send = text to send, can include variables, date-time, shift,

Response = Response to wait for, can include variables, date-time, shift,

[0x04] for I/O managing [Output (1)] [Val (1)] [Action (1)] [Input (1)] [Val (1)] [Delay (2)] [Stop [0x01]]

Output = Output number to set : [0x01] to [9], [0x00] for none

Val = Value of the output to set : [0x01] Output is close, [0x00] output is open

Action = [0x01] Set the output to the oposit stat of Val at the end.

Input = Input number to scan : [0x01] to [9], [0x00] for none

Delay = in mili-seconds : a 16-bit integer, the most significant byte to the left.

Stop = [0x01] Stop marking if timeout is reached before the response is received, [0x00] go to next line after time-out or response received

[0x05] for Pause No data

At a PAUSE line, the control send the char P [0x50] and wait for :
 { - response p [0x70] from RS232 , to continue the marking,
 - or the Start button to be pressed

[0x06] for Rotation [Goto XY (1)]

Goto XY = [0x01] if the stylus goes to the position XY before rotation, [0x00] if the Rotation is done without moving the stylus

The rotation angle value is set in the line Attribut option (see page 22)

[0x07] for Move Z No data

the Z value is set in the Z field

[0x08] for Auto Z [1st dot (1)] [DZ (1)] [Dmax (2)]

1st dot = [0x01] to do the Autosensing at the first impact, [0x00] to do the Autosensing at the XY coordonate of that line.

Dz = from [0x01] to [0x63] : Stylus/part distance in 10th of mm

Dmax = Maximum move in 10th of mm

the Dmin move is set in the Zfiled

Examples :

Adding the text : SIC-MARKING

[0x02] [0x00] [0x35] [0x6C] [0xFF] [0xFF] [0x00] [0x32] [0x00] [0x50] [0x00] [0x00] [0x00] [0x2D] [0x00] [0x41] [0x02] [0x05] [0x02] [0x00]
 a b c X Y Z L H E F Q T
 [0x81] OCR [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] SIC-MARKING [0xFF] [0x03]
 1 2 3 4 d e

Adding the vectorial logo SIC

[0x02] [0x00] [0x35] [0x6C] [0xFF] [0xFF] [0x00] [0x05] [0x00] [0x08] [0x00] [0x00] [0x00] [0x63] [0x00] [0x63] [0x02] [0x05] [0x08] [0x01]
 a b c X Y Z L H E F Q T
 [0x05] [0x01] [0x00] SIC [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0xFF] [0x03]
 5 6 3 7 3 d e

a = Start of Text [STX]	4 = Text
b = Command code	5 = Logo Kind
c = break-code setting	6 = proportional
d = break-code	7 = Logo name
e = End of text [ETX]	8 = Ecc200 format
1 = font kind	
2 = font Name	10 = I/O setting
3 = reserved [NUL]	11 = 1st dot

• **FILE_SET_OPTION** Code 'o' (0x6F in hexadecimal) Marking file Option

Data = [Option code (1)] [Data (n)]
 Answer = [Return code (1)]
 See page 22 for more details

• **LINE_SET_OPTION** Code 'a' (0x61 in hexadecimal) last line of marking file Option

Data = [Option code (1)] [Data (n)]
 Answer = [Return code (1)]
 See page 22 for more details

• **SAVE_FILE** Code 'e' (0x65 in hexadecimal)

Data = [File name (0 to 11 bytes)]
 Answer = [Return code (1)]
File name : optional, if present, its rename current file

Example :

Saving current file to MY_FILE2

• **FILE LIST** Code 'L' (0x4C in hexadecimal)

Data = Name [0x0B] reserved [0x01] kind [0x01]
 Answer = (Name [0x0B] reserved [0x01] Kind [0x01] Size [0x02] reserved [0x04]) x (number of file found)
Name : file Name to look for, or 11 *NULL* char for every file
 File name must be 12 bytes long, padding with *NULL* char to the right
 File name must be in upper-case without space (char 0x20).
reserved : one reserved byte, must be *NULL*

Example :

String to send : (list all file named : TEST)

[0x02] [0x00] [0x35] [0x4C] [0x00] [0x0D] [0x54] [0x45] [0x53] [0x54] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]

a b c d e f g h i

Answer string:

- When there is two files TEST : one marking file of 77 bytes, and one DOT LOGO file of 520 bytes

[0x02] [0x00] [0x35] [0x4C] [0x00] [0x26]

a b c d e

[0x54] [0x45] [0x53] [0x54] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x02] [0x00] [0x4D] [0x00] [0x00] [0x00] [0x00] [0x00]

[0x54] [0x45] [0x53] [0x54] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x04] [0x02] [0x08] [0x00] [0x00] [0x00] [0x00] [0x00]

f g h j g i

- When there is no file TEST

[0x02] [0x00] [0x35] [0x4C] [0x00] [0x03]

a b c d e i

a = Start of Text [STX]
b = Desable check-sum
c = Protocol version
d = Command code
e = Data size
f = File name
g = reserved
h = File kind
i = End of text [ETX]
j = File size

- Data = Name[0x0B] reserved[0x01] Kind[0x01] [File contents (n bytes)]
 Answer = [Return code (1)]
- Name** : file Name to look for, or 12 *NULL* char for every file
 File name must be 12 bytes long, padding with *NULL* char to the right
 File name must be in upper-case without space (char 0x20).
- reserved** : one reserved byte, must be *NULL*
- Kind** : 0 = all kinds 2 = marking file
 4 = dot logo file 5 = scribbling logo file
- File contents** : all the bytes of the file

Contents of a Dot logo file :

X_i, Y_i : coordData du point i du logo

•E6_TO_PC

Code 'S'

(0x53 in hexadecimal)

Data = Name[0x0B] reserved[0x01] Kind[0x01]

Answer = Name[0x0B] reserved[0x01] Kind[0x01] [File contents(n bytes)]

Name : file Name to look for, or 12 *NULL* char for every file

File name must be 12 bytes long, padding with *NULL* char to the right

File name must be in upper-case without space (char 0x20).

reserved : one reserved byte, must be *NULL*

Kind : 0 = all kinds 2 = marking file

4 = dot logo file 5 = scribbling logo file

File contents : all the bytes of the file

Example :

String to send :

[0x02] [0x00] [0x35] [0x53] [0x00] [0x0D]
a b c d e
[0x54] [0x45] [0x53] [0x54] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x02] [0x03]
f g h i

Answer string:

- When the TEST file has been found

[0x02] [0x00] [0x35] [0x53] [0x02] [0x22]
a b c d e
[0x54] [0x45] [0x53] [0x54] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x02] [File contents(533)] [0x03]
f g h j i

- When there is not TEST file

[0x02] [0x00] [0x35] [0x53] [0x00] [0x00] [0x01] [0x03]
a b c d e

a = Start of Text [STX]

b = Desable check-sum

c = Protocol version

d = Command code

e = Data size

f = File name

g = reserved

h = File kind

i = End of text [ETX]

j = File contents

k = Error : file not found

• DEL_FILE

Code 'D'

(0x44 in hexadecimal)

Data = Name[0x0C] Kind[0x01]

Answer = [Return code(1)]

Name : File name to be deleted (written in upper case)

Kind : 2 = Marking file

4 = Dot logo file

5 = Scribbling logo file

Example :

[0x02] [0x00] [0x35] [0x44] [0x00] [0x0D]
a b c d e
[0x54] [0x45] [0x53] [0x54] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x02] [0x03]
f g h i

a = Start of Text [STX]

b = Desable check-sum

c = Protocol version

d = Command code

e = Data size

f = File name

h = File kind

i = End of text [ETX]

f) File options definition:

• Diameter Option

Setting the part diameter (for the D-Axis use only)

Code [0x02] (0x02 in hexadecimal)

Data=[Diameter (2)]

Total command data size =3

Diameter in 10th of millimeters : a 16 bit integer, the most significant byte to the left

Example :

Setting a 30 mm diameter.

[0x02] [0x00] [0x35] [0x00] [0x03] [0x02] [0x01] [44] [0x03]

a	b	c	d	e	f	g	h
a = Start of Text [STX]	b = Desable check-sum				d = Command code		
c = Protocol version					f = Option code		
e = size					h = End of text [ETX]		
g = Diameter							

• Comment Option

Setting the file comment (free text)

Code [0x03] (0x03 in hexadecimal)

Data=[Comment(1 to 39 bytes)] [Reserved(1)]

Total command data size, from 2 bytes to 41 bytes

Comment : Free text (39 maximum chars)

Reserved : char [0x00] in hexadecimal

Example :

Setting the comment : "Part ZCB 1245".

[0x02] [0x00] [0x35] [0xFF] [0xFF] [03] Part ZCB 1245 [0x00] [0xFF] [0x03]

a	b	c	d	e	f	g	h	i	j
a = Start of Text [STX]	b = Desable check-sum				d = Command code				
c = Protocol version					f = Option code				
e = size					h = Reserved [NULL]				
g = Comment					j = End of text [ETX]				
i = break-code									

g) Last marking file line option description :

• Attribut option

Pritable setting

Code [0x01] (0x01 in hexadecimal)

Data=[B (1)] [I (2)] [A (2)] [R (2)]

Total command data size =8

B Attribut Byte : let's split that attribut into 8 bits: (R A C I V H 1 2).

R : reserved

A : there is a non zero angle or a non zero raduis

C : Center the text with the X and Y coordonate

I : there is a non zero italic value

V : Vertical mirror

H : Horizontal mirror

1 : 180° rotate

2 : 90° rotate

I Italic value : a 16-bit signed integer the most significant byte to the left (the value 100 is for a 45° italic)

A Rotate angle : a 16-bit signed integer the most significant byte to the left, in 100th degré (from -18000 to +18000)

R Radius : a 16-bit signed integer the most significant byte to the left, en 10th of mm

Example :

Center the line and a 10% italic value.

[0x02] [0x00] [0x35] 1 [0x00] [08] [01] [48] [0x00] [0x0A] [0x00] [0x00] [0x00] [0x00] [0x00] [0x03]

a	b	c	d	e	f	B	I	A	R	g
a = Start of Text [STX]	b = Desable check-sum				d = Command code					
c = Protocol version					f = Option code					
e = size										
g = End of text [ETX]										

• Indexor Option

D-axis setting

Code 2 (0x02 in hexadecimal)

Data=[On/Off (1)]

Total command data size =2

On/Off [0x00] not active, [0x01] Active

That option is used only if the part diameter is not null

Example :

Activate the Indexor mode

[0x02] [0x00] [0x35] 1 [0x00] [0x02] [0x02] [0x01] [0x03]

h) Manual programming

• ORIGIN Code 'H' (0x48 in hexadecimal)

Data = [Motors list (1)] (optional)

Answer = [machine status (3)]

Motors list = binary mix of these values : 0x01 for X axis, 0x02 for Y axis and 0x04 for accessory axis
Default value is 0x07

Machine status = see fig 1 page 6

Example :

Home position for X, Y et Z

[0x02] [0x00] [0x35] H [0x00] [0x00] [0x03]

home position for Y axis

[0x02] [0x00] [0x35] H [0x00] [0x01] [0x02] [0x03]

a **b** **c** **d** **e** **f** **g**

a = Start of Text [STX]

b = Desable check-sum

c = Protocol version

d = Command code

e = Data size (1 or 0)

f = Moteur Y

g = End of text [ETX]

• IMPACT Code 'P' (0x50 in hexadecimal)

Data = [Speed(1)] ([X₁(4)] [Y₁(4)] [Z₁(4)] [F₁(1)]) ([X₂(4)] [Y₂(4)] [Z₂(4)] [F₂(1)]) ...

Answer = [machine status (3)]

Vitesse : marking speed from [0x01] to [0x09]

Xi : X coordonate of impact number *i* (a 32 bit signed integer, the most significant byte to the lest) in step

Yi : Y coordonate of impact number *i* (a 32 bit signed integer, the most significant byte to the lest) in step

Zi : Z coordonate of impact number *i* (a 32 bit signed integer, the most significant byte to the lest) in step

Fi : - force of impact ([0x00]=no impact, [0x09]=maximum impact) for percussion machine,
- [0x01] Stylus Up, [0x00] = Stylus Down for scratching machine.

Machine status = see fig 1 page 6

Example :

[0x02] [0x00] [0x35] P [0x00] [0x1B] [0x08] [0x00] [0x00] [0x02] [0x00] [0x00] [0x00] [0x00] [0x02] [0x00] [0x00] [0x00] [0x00] [0x05]
[0x00] [0x00] [0x00] [0x01] [0x00] [0x00] [0x00] [0x00] [0x01] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x05] [0x03]

a **b** **c** **d** **e** **f** **g** **h** **i** **j** **k**

a = Start of Text [STX]

b = Desable check-sum

c = Protocol version

d = Command code

e = Data size (1 + 2*13)

f = Speed 8

g = X

h = Y

i = Z

j = Depth

k = End of text [ETX]

• SET_OUPUT Code 'Z' (0x5A in hexadecimal)

Data = [Number (1)] [Value]

Number : This is the output number from 0x01 to 0x08

value : the value to set : 0x00 (off) or 0x01 (on)

• GET_INPUTS Code 'Y' (0x59 in hexadecimal)

Data = none

Answer = [Input status (1)]

InputStatus : This is the binary combinason of all inputs 1 to 8

A return value 0 meens all inputs are inactive.

A return value 5 meens input 1 and 3 are active.

A return value 128 meens input 8 is active.

i) Settings functions

• RESTART Code '*' (0x2A in hexadecimal)

Data = no data

Answer = [Return code (1)]

At the begining of start, the control send : booting...[CR] [LF]

When it is ready, the control send : e6 ready[CR] [LF]

You must restart the control after setting control options or machine options.

Example :

[0x02] [0x00] [0x35] * [0x00] [0x00] [0x03]

• **SYNCHRO_DATEHEURE** Code 'h' (0x68 in hexadecimal)

Data = AAAA-MM-JJ HH:MM:SS
 Answer = [Return code (1)]
AAAA : Year written with 4 chars
MM : Month written with 2 chars
JJ : Day written with 2 chars
hh : Hour written with 2 chars
mm : Minutes written with 2 chars
ss : Seconds written with 2 chars

Example :

[0x02] [0x00] [0x35] h [0x00] [0x13] 2003-05-14 14:02:31 [0x03]
a **b** **c** **d** **e** **f** **g**
a = Start of Text [STX] **b** = Desable check-sum
c = Protocol version **d** = Command code
e = Data size (19) **f** = Date-Time
g = End of text [ETX]

Note : If the task-bar of the control freeze, restart the control.

• **VITESSE_COM** Code 'v' (0x76 in hexadecimal)

Data = [Port (1)] [Speed (1)]
 Answer = [Return code (1)] then serial port change speed

Port : 'H' ou '1' for the HOST port,
 'S' ou '2', for the SERIAL port
 'C' ou '0' for the current serial port
 Vitesse : [0x00] = original speed [0x01] = 300, [0x02] = 600, [0x03] = 1200,
 [0x04] = 2400, [0x05] = 4800, [0x06] = 9600, [0x07] = 19200,
 [0x08] = 38400, [0x09] = 57200

you must wait 0.5 second before using the serial port again

• **SET_VAR_GLOBALE** Code 's' (0x38 in hexadecimal)

Data = [variable number (1)] [Value (0 byte to 25 bytes)]
 Answer = [Return code (1)]
Variable number : number of the global variable, from [0x00] to [0x09] (or '0' to '9')
Value : value of the global variable

Example :

Setting second global variable with value : VNP
 [0x02] [0x00] [0x35] 8 [0x00] [0x04] 1VNP [0x03]
a **b** **c** **d** **e** **f** **g** **h**
a = Start of Text [STX] **b** = Desable check-sum
c = Protocol version **d** = Command code
e = size **f** = variable number
g = value **h** = End of text [ETX]

• **SET_INC_GLOBALE** Code '9' (0x39 in hexadecimal)

Data = [variable number (1)] [Value (4)]
 Answer = [Return code (1)]
Variable number : number of the global variable, from [0x00] to [0x09] (or '0' to '9')
Value : value of the global increment : a 32-bit integer (the most significant byte to the left)

Example :

Setting second global increment with value : 24568
 [0x02] [0x00] [0x35] 9 [0x00] [0x05] [0x01] [0x00] [0x00] [95] [248] [0x03]
a **b** **c** **d** **e** **f** **g** **h**
a = Start of Text [STX] **b** = Desable check-sum
c = Protocol version **d** = Command code
e = size **f** = variable number
g = value **h** = End of text [ETX]

- Data = [variable name (20 bytes max)] [shift number(1)] [Value (4)]
- Answer = [Return code (1)]
- Variable name** : in upcase, cannot be longer then 20 char, cannot include spaces
- Indice Equipe** : number of the shift, from [0x00] to [0x09] (or '0' to '9')
- Value** : value of the global increment : a 32-bit integer (the most significant byte to the left)
- Example :
- Setting increment named INCSHIFT for the second shift with the value 111*
- [0x02] [0x00] [0x35] 0 [0xFF] [0xFF] INCSHIFT1 [0x00] [0x00] [0x00] [111] [0xFF] [0x03]
- | | | | | | | | | | |
|--------------------------------|----------|----------|----------|----------|------------------------------|----------|--------------|----------|----------|
| a | b | c | d | e | Name | f | Value | g | h |
| a = Start of Text [STX] | | | | | b = Desable check-sum | | | | |
| c = Protocol version | | | | | d = Command code | | | | |
| e = Break-code mode | | | | | f = shift number | | | | |
| g = Break-code | | | | | h = End of text [ETX] | | | | |

- Data = [option code (1)]
 Answer = [option code (1)] [Data (n)]
See page 26 for more details

- Data = [Option code (1)] [Data (n)]
 Answer = [Return code (1)]
See page 26 for more details

- Data = [Option code (1)] [Data (n)] ou ALL to delete all options
 Answer = [Return code (1)]
See page 26 for more details

- This function is used to reset the machine configuration.
The machine configuration is base on these OPTIONS (see SET_OPTION chapter)
- MACHINE_NAME Option
 - MACHINE_ACCESSORY Option
 - MACHINE_ADVANCE Option

- ```

Data = none
Answer = MachineName[11] Reserved[1]
 SizeX[4] SizeY[4] SizeZ[4]
 Kind3rdAxie[1] Scraching[1] AutoSensing[1] Reserved[1]
 full machine name[15] Reserved[1]
 machine serial number[4]

Example :
Send : [0x02][0x00][0x35][0xc81][0x00][0x00][0x03]

Received : [0x02][0xc81][0x00][0x30] C151[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00]
 [0x00][0x00][0x06][0x40] [0x00][0x00][0x03][0xE8] [0x00][0x00][0x01][0xF4]
 [0x01][0x00][0x00][0xFC]
 c151 (rev A)[0x00][0x00][0x00][0x00]
 [0x06][0x2B][0x9A][0x61][0x03]

```

String to send :

- 1 : Set the “`MACHINE_NAME`” option to “`P62`”
- 2 : Del the “`MACHINE_ACCESSORY`” option
- 3 : Del the “`MACHINE_ADVANDED`” option
- 4 : Reload the system configuration

25/60

- Set a c151 system with a standard 50mm Znum axie

String to send :

- 1 : Set the "MACHINE\_NAME" option to "C151"
- 2 : Set the "MACHINE\_ACCESSORY" option to a standard ZNUM of 50 mm
- 3 : Del the "MACHINE\_ADVANDED" option
- 4 : Reload the system configuration

```
[0x02][0x00][0x35]2[0x00][0x0D]MC150[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00]
2[0x00][0x35]y[0x00][0x00][0x1A][0x09][0x00][0x00][0x05][0x35][0x03][0x15][0x01][0x89][0x00][0x00][0x00]
[0x06][0x2B][0x9A][0x61][0x06][0x30][0x97][0x81][0x07][0x34][0x95][0x91][0x08][0x3B][0x93][0xA1][0x09][0x43]
[0xA2][0xB1][0x0B][0x4D][0xA2][0xC1][0x0E][0x5B][0xA2][0xD2][0x12][0x6F][0xC2][0xF4][0x16][0x8C][0xC1][0xF5]
3[0x00][0x01]z
[0x80][0x00][0x00][0x03]
```

- Set a i111s system with lost step control and no 3<sup>rd</sup> axis

String to send :

- 1 : Set the "MACHINE\_NAME" option to "I111S"
- 2 : Del the "MACHINE\_ACCESSORY" option
- 3 : Set the "MACHINE\_ADVANDED" option
- 4 : Reload the system configuration

```
[0x02][0x00][0x35]2[0x00][0x0D]MI111S[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00]
3[0x00][0x01]y
2[0x00][0xAB]z[0x15][0x10][0x00][0x08][0x03][0x10][0x00][0x00][0x00][0x00][0x00][0x00]
[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00]
[0x00][0x00][0x00][0x00][0x01][0x02][0x02][0x02][0x02][0x02][0x02][0x01][0x02][0x03][0x04]
[0x05][0x06][0x07][0x00][0x00][0x02][0x20][0x00][0x00][0x00]...[0x00]
[0x80][0x00][0x00][0x03]
```

### k) Control option definition:

**Note:** After setting or deleting option, you need to restart the control.

- LANGUAGE Option

Language

Code 'L' (0x4C in hexadecimal)

Data= [traduction file name (11)] [Reserved]

Total command data size=13

**Traduction file name** : File name of the font written with 11 bytes, padding with NULL char to the right  
**Reserved** : char [0x00] in hexadecimal

Example:

*Setting the US language*

```
[0x02][0x00][0x35]2[0x00][0x0D]LUS[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x03]
a b c d e f g h i
```

|                                |                              |
|--------------------------------|------------------------------|
| <b>a</b> = Start of Text [STX] | <b>b</b> = Desable check-sum |
| <b>c</b> = Protocol version    | <b>d</b> = Command code      |
| <b>e</b> = size                | <b>f</b> = Option code       |
| <b>g</b> = File name langue    | <b>h</b> = reserved [NULL]   |
| <b>i</b> = End of text [ETX]   |                              |

- Option FICHIER

File to open at boot time

Code 'F' (0x46 in hexadecimal)

Data= [File name (11)] [Reserved]

Total command data size =13

**File name** : Written with 11 bytes, padding with NULL char to the right  
**Reserved** : char [0x00] in hexadecimal

Example:

*Setting the marking file TEST*

```
[0x02][0x00][0x35]2[0x00][0x0D]FTEST[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x03]
a b c d e f g h i
```

|                                |                              |
|--------------------------------|------------------------------|
| <b>a</b> = Start of Text [STX] | <b>b</b> = Desable check-sum |
| <b>c</b> = Protocol version    | <b>d</b> = Command code      |
| <b>e</b> = size                | <b>f</b> = Option code       |
| <b>g</b> = File name           | <b>h</b> = reserved [NULL]   |
| <b>i</b> = End of text [ETX]   |                              |

- Option VALUE PAR DEFAUT

Default values editing fichiers

Code 'f' (0x66 in hexadecimal)

Data=[L(2)][H(2)][E(1)][V(1)][Res(1)][F(1)][Qua(1)][Zero(1)][Kind(1)][Name(11)][Reserved(1)][Reserved(1)]

Total command data size =23

**W, H** : Width, Height in 10<sup>th</sup> of mm : a 16-bit integer, the most significant byte to the lest

**E** : space between char  
**V** : marking speed [0x01] à [0x09]  
**Reserved** : not use  
**Qua** : marking quality : [0x01] for a 5x7 grid, [0x02] for a 9x13 grid, [0x03] to [0x09] vectoriel marking  
**Zero** : [0x01] for crossed zero, [0x00] for not crossed zero  
**Kind** : Font kind: [129] for Font\_9x13, [131] for Font\_TT  
**Name** : Font name written with 11 bytes, padding with NULL char to the right  
**Reserved** : char [0x00] in hexadecimal

Example:

```

[0x02][0x00][0x35]2[0x00][0x17]
f[0x00][0x2D][0x00][0x41][0x02][0x07][0x09][0x03][0x02][0x00][129]OCRA[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x03]
f L H E V Res F Q Z Kind g h h i

```

**a** = Start of Text [STX]                      **b** = Desable check-sum  
**c** = Protocol version                          **d** = Command code  
**e** = size                                          **f** = Option code  
**g** = File name                                  **h** = reserved [NULL]  
**i** = End of text [ETX]

#### • KEYBOARD Option

#### Keyboard setting

Code 'C' (0x43 in hexadecimal)

Data= [Reserved (1)] [Kind (1)] [Confirm (1)] [Locked (1)] [Russian (1)] [Slave (1)]

Total command data size =7

**Reserved** : char [0x00] in hexadecimal  
**Kind** : External keyboard layout: [0x01] =AZERTY, [0x02] =QWERTY, [0x03] =QWERTZ  
**Confirm** : [0x01] confirm message when exit window without saving, [0x00] no confirmation  
**Lock** : [0x01] lock the keyboard, [0x00] unlock the keyboard  
**Russian** : [0x01] Russian keyboard, [0x00] other keyboard  
**Slave** : [0x00] stand alone mode [0x07] slave mode

If Slave = 0: when user press START button: the system start the marking cycle

If Slave = 7: when user press START button: the system send [0x0D] to serial port and host port

Example:

*Setting an AZERTY external keyboard*

```

[0x02][0x00][0x35]2[0x00][0x07]C[0x00][0x01][0x00][0x01][0x00][0x00][0x03]

```

#### • STATISTICS Option

#### Controls Statistics

Code 'D' (0x44 in hexadecimal)

Data= [Nb Cycle (4)] [Nb Char (4)] 9\*([Force (4)]) 3\*([NbPas (6)]) 10\*([Options (6)])

Total command data size =123

**Nb Cycle** : Number of cycles: a 32-bit integer, the most significant byte to the left  
**Nb Char** : Number of char: a 32-bit integer, the most significant byte to the left  
**Force** : Number of impact for each force: 9 integers each 32-bit, the most significant byte to the left  
**NbPas** : Number of step ran for each motor: 3 integers each 48-bit, the most significant byte to the left  
**Option** : Number for the options: a table of 10 integers each 48-bit, the most significant byte to the left  
           1<sup>st</sup> value for the number of autosensing ran  
           2<sup>nd</sup> value, for scratching machine: the number of step ran, stylus up  
           3<sup>rd</sup> value, for scratching machine: the number of step ran, stylus down  
           *for now, only these 3 values are used*

Example:

*Getting the control statistics*

```

[0x02][0x00][0x35]1[0x00][0x01]D[0x03]

```

*the answer is*

```

[0x02]1[0x00][123]D[0x00][0x00][08][62][0x00][0x0C][64][0x00][0x00][0x0C][0x17][0x00][0x0C][0x17][0x00][0x0C]
[0x00][0x00][0x00][0x0C][0x0C][64][0x00][0x00][0x00][0x00][0x17][100][0x00][0x00][0x00][0x01][0x17]
[0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00][0x00]...[0x03]

```

#### • MACHINE\_NAME Option

#### machine name (C150, I80, ...) caution : letters must be in upper case

Code 'M' (0x4D in hexadecimal)

Data= [Machine Name (11)] [Reserved (1)]

Total command data size =13

**MachineName** : Name of the machine :  
                   -S.I.C.- = Smart Integrated Chip  
                   SPECIFIC = Specific configuration  
                   others = standard machine file name

**Reserved** : char [0x00] in hexadecimal

Example:

*Setting for the C151*

[0x02] [0x00] [0x35] 2 [0x00] [0x0D] MC150 [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x03]

• **MACHINE\_ACCESSORY Option** 3<sup>rd</sup> axie configuration

Code 'y' (0x79 in hexadecimal)

Data= [Lg (4) ] [Offset (2) ] [Ratio (2) ] [P (1) ] [V (1) ] [K (1) ] [C (1) ] [a (1) ] [b (1) ] [c (1) ] [d (1) ] [Speed (36) ]

Total command data size =53

**LG** : Size of the axie in step a 32 bit integer  
**Offset** : Offset in step from origine of the axie in step a 16 bit signed integer  
**Ratio** : ratio of the axie in step per centimeter a 16 bit integer  
**P** : for futur use, need to be 3. It is an 8 bit integer  
**V** : Origin speed of the axie time 10. From 15 (=150 step/s) to 100(=1000 step/s) an 8 bit integer  
**K** : 3<sup>rd</sup> axie kind. It is an 8 bit integer :  
    **0**: no 3<sup>rd</sup> axie  
    **1**: Z num  
    **2**: Z binary  
    **3**: D-Axis  
    **4**: Feeder  
**C** : an 8 bit binary combination:  
    **Bit 1**: value of the sensor when activated  
    **Bits 2,3,4**: value of the motor current in stand by (0=0A, 1=0.75A, 2=1A, 3=1.5A, 4=3A)  
    **Bits 5,7**: value of the motor current in marking cycle (0=0A, 1=0.75A, 2=1A, 3=1.5A, 4=3A)  
    **Bit 8**: reserved

**a, b, c, d** : optional data depend on the 3<sup>rd</sup> axie kind. Tey are 8 bit integers each

for Z num :

**a**: 0 if no Autosensig and 1 if AutoSensing actif  
**b**: internal length of Autosensing piston in 10<sup>th</sup> mm from 0 to 99  
**c**: input where the autosensing is linked  
**d**: value of the sensor when active (0 or 1)

for Z binary

**a**: activation mode :0 for file activation and 1 for Line activation  
**b**: input where retract sensor is connected (0 if no sensor)  
**c**: input where out sensor is connected (0 if no sensor)  
**d**: output to drive the axie (from 1 to 8)  
**Offset**: for this axie, Offset represents the delay "IN" in millisecond  
**Ratio**: for this axie, Ratio represents the delay "OUT" in millisecond

for D-Axis

**a, b, c, d** : not used  
**Ratio**: for this axie, Ratio represents the number of step per turn

for Feeder

**a**: hidden time return (1 for YES and 0 for NO)  
**b**: part detection sensor (0 for none)  
**c**: output clamping(0 for none)  
**d**: not used  
**Offset**: for this axie, Offset represents the offset from the marking position to the evaluation position in step.

**Speed** : this is the 9 speed configuration ( 9 x 4 bytes). For each speed:

**a**: starting speed time 10 + 90 from 6 (=150 step/s) to 200 (= 2090 step/s)  
**b**: max steed time 15 + 90 from 4 (=150 step/s) to 255 (=3915 step/s)  
**c**: please, use fallowing data  
**d**: please, use fallowing data

| Speed | 1    | 2    | 3    | 4    | 5    | 6    | 7    | 8    | 9    |
|-------|------|------|------|------|------|------|------|------|------|
| c     | 0x9A | 0x97 | 0x95 | 0x93 | 0xA2 | 0xA2 | 0xA2 | 0xC2 | 0xC1 |
| d     | 0x61 | 0x81 | 0x91 | 0xA1 | 0xB1 | 0xC1 | 0xD2 | 0xF4 | 0xF5 |

Example:

*Setting for a Z axie of 50 mm*

[0x02] [0x00] [0x35] 2 [0x00] [0x35] y [0x00] [0x00] [0x1A] [0x09] [0x00] [0x00] [0x05] [0x35] [0x03] [0x15] [0x01] [0x89] [0x00] [0x00] [0x00] [0x00] [0x06] [0x2B] [0x9A] [0x61] [0x06] [0x30] [0x97] [0x81] [0x07] [0x34] [0x95] [0x91] [0x08] [0x3B] [0x93] [0xA1] [0x09] [0x43] [0xA2] [0xB1] [0x0B] [0x4D] [0xA2] [0xC1] [0x0E] [0x5B] [0xA2] [0xD2] [0x12] [0x6F] [0xC2] [0xF4] [0x16] [0x8C] [0xC1] [0xF5] [0x03]

• **MACHINE\_ADVANCED Option** advanced configuration of the system (IO config, axes priority, ...)

Code 'z' (0x7A in hexadecimal)

Data= [Table (30) ] [Buffer (140) ]

Total command data size =171

**Table** : table of 10 items. Each item contain 3 bytes :

**a**: Code of the item  
**b**: Length of it's data  
**c**: offset where data start in the Buffer

**Buffer** : datas of items configurations

**Code definition of items**

**0x15**: Input/Output configuration. Data= [Input (8) ] [Output (8) ] Length=16 bytes

**Input**: settings of the 8 inputs, for each :

0 = no settings  
1 = start the cycle  
2 = file selection  
3 = pause validation  
4 = home position

**Output**: settings of the 8 output, for each :

0 = no settings  
1 = marking error  
2 = last dot marked

3 = Cycle in progress  
 4 = in pause  
 5 = system ready  
 6 = autosensing : part detected out of bounds  
 7 = autosensing : no part detected in bounds

**0x16:** Axes priority configuration. Data= [First move (1) ] [ Second move (1) ] [ Third move (1) ] Length = 3 bytes  
 for each move, data represent the concerned motors, witch is a binary combination of

**X axis:** 1  
**Y axis:** 2  
**3<sup>rd</sup> axis:** 4

**0x18:** Cycle configuration. Data = [Start of cycle (1) ] [ End of cycle (1) ] [ value (1) ] Length = 3 bytes

**Start of cycle:** to to before first dot is printed. 0 = home position. 1 = Hold

**End of cycle:** to do after the last dot is printed. 0 = home position. 1 = hold. 2 = lost step test.

**value:** lost step definition

Example:

*Default IO setting + lost step test at end of cycle.*

```
[0x02] [0x00] [0x35] 2 [0x00] [0xAB] z [0x15] [0x10] [0x00] [0x08] [0x03] [0x10] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
[0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
[0x00] [0x01] [0x02] [0x02] [0x02] [0x02] [0x02] [0x01] [0x02] [0x03] [0x04] [0x05] [0x06] [0x07] [0x00]
[0x00] [0x02] [0x20] [0x00] [0x00] [0x00] ... [0x00] [0x03]
```

#### • SHIFT Option

Shift setting

Code 'E' (0x45 in hexadecimal)

Data=10\*([Name (19) ] [Reserved (1) ] [Time (2) ] )

Total command data size =221

**Name** : Shift Name, padding with NULL chars to the right :  
**Reserved** : char [0x00] in hexadecimal  
**Time** : beginning of shift time, a 16 bit integer which value is : Hour\*100 + Minute

Example:

*Setting 3 shift named MATIN starting at 01h30, MIDI starting at 12h30 and SOIR starting at 20h30*

```
[0x02] [00] [0x35] 2 [00] [221] E MATIN [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [230]
MIDI [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [0x05] [0x32]
SOIR [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [00] [0x07] [258]
...
[00] [0x03]
```

#### • GLOBALES VAR Option

setting the global variables

Code 'G' (0x47 in hexadecimal)

Data=10\*([Size (1) ] ) 10\*([Value (23) ] [Reserved (1) ] )

Total command data size =251

**Size** the size of each variable : 10 integers 8-bits from [0x00] to [0x17]  
**Value** value of the variable : ten strings of 23 char each ( the variable are padding with NULL char to the right )  
**Reserved** : char [0x00] in hexadecimal

Example:

*setting the two first global var to value GLOB1 and GLOB2.*

```
[0x02] [0x00] [0x35] 2 [0x00] [251] G [0x05] [0x05] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
GLOB1 [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
GLOB2 [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
[0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
...
[0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x03]
```

#### • GLOBALES INC Option

setting the global increments

Code 'I' (0x49 in hexadecimal)

Data=10\*([Size (1) ] ) 10\*([Value (4) ] )

Total command data size =51

**Size** the size of each increment: 10 integers 8-bits from [0x00] to [0x17]  
**Value** values of the increment : 10 integers 32-bits , the most significant byte to the left

Example:

*Setting the 1 and 2 increments ( the rest of the 8 increments are not used )*

```
[0x02] [0x00] [0x35] 2 [0x00] [251] I [0x05] [0x05] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00]
[0x00] [0x00] [0x03] [0x19]
[0x00] [0x01] [0x05] [129]
[0x00] [0x00] [0x00] [0x00]
...
[0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x00] [0x03]
```

#### • ALPHA INC BASE Option

Setting the alphanumeric increment rules

Code 'B' (0x42 in hexadecimal)

Data= [Base (from 2 to 64 bytes) ]

Total command data size =3 à 65  
**Base** base definition

Example: *setting the hexadecimal base.*  
[0x02] [0x00] [0x35] 2 [0x00] [0x11] B0123456789ABCDEF [0x03]

- **UNIT Option** metric or inch system  
Code 'U' (0x55 in hexadecimal)  
Data= [Unit (1) ]  
Total command data size =2  
**Unit** [0x00] for inch system and [0x01] for metric system

## 4 - Compatibility with the communication protocol of the 4A version program

### a) Communication protocol:

The string sent to the controller must start with the characters **STX** (Start TeXte: 02h), followed by a list of functions (described on the next pages) and the string must end with **ETX** (End TeXte: 03h).

### b) String to be sent:

**Control code CheckSum:** In order to detect a possible error in the transmission, the CheckSum is calculated depending on the string sent by the main system and receptioned by the machine. If the string has been correctly transmitted, the code calculated by the marking machine is the same as the code sent by the main system.

The **CheckSum** corresponds to an "EXCLUSIVE OR" of all codes transmitted in the string, including the STX code and the ETX code.

### c) List of functions:

Each function starts with a control code, followed by the data corresponding to the function to be used :

| Code  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | | [ENQ] | Definition of a variable in the valid file or after loading a file through the [SOH] function<br>[ Data: name of the variable + '=' + value to be attributed]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | | [LF]  | Definition of the marking speed (standard is speed 5)<br>[Data : 0 to 9 ]  Examples:

00 01 00 : Emergency stop activated

00 30 00 ( = 00 10 00 + 00 20 00 ) : Marking is out of bounds for X axis

00 48 00 ( = 00 08 00 + 00 40 00 ) : Error with origin sensing on Y

## II - SLAVE MODE – COMMUNICATION PROTOCOL – INPUT / OUTPUT

### 1 - SERIAL COMMUNICATION

#### a) TEXT format of the communication protocol

##### •String format to be sent:

<Command> □ <Data1> □ <Data2> [CR][LF]

where

< Command > is the command code  
 < Data1> are the data of the command  
 [CR] is the 0x0D in hexadecimal ( facultative)  
 [LF] is the 0x0A in hexadecimal  
 □ space char

##### •Response of the system

<command> <Answer>[CR][LF]

The control response to every command. Mostly, the answer will be OK or BAD FORMAT.

##### •Commun functions

| ASCII CODES |      |         |
|-------------|------|---------|
| Codes       | Hexa | decimal |
| [CR]        | 0D   | 13      |
| [LF]        | 0A   | 10      |
| □           | 20   | 32      |
| [NUL]       | 00   | 00      |
| [SOH]       | 01   | 01      |
| [STX]       | 02   | 02      |
| [ETX]       | 03   | 03      |
| [EOT]       | 04   | 04      |
| [ENQ]       | 05   | 05      |
| [ACK]       | 06   | 06      |

| [VT]        | 0B   | 11      |
| [NAK]       | 15   | 21      |

| Command               | Description                                                                                                                                                                                                                                                  | Data to send                                                                                                                                                                                                                              | Response of the system                                                                                                                                 |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>LOADFILE</b>       | Select and load a file                                                                                                                                                                                                                                       | Name of the file to be loaded (11 chars max)                                                                                                                                                                                              | OK : file loaded<br>ERROR : File not found                                                                                                             |
| <b>SETVAR</b>         | Set a variable to the current file                                                                                                                                                                                                                           | <Name of the var> <Value>                                                                                                                                                                                                                 | OK<br>VAR NOT FOUND                                                                                                                                    |
| <b>RUN</b>            | Start the marking <i>Start cycle</i><br>If there is PAUSE in the marking file :<br>At a PAUSE line, the control send the char P [0x50] and wait for :<br>- response p [0x70] from RS232,<br>- or the Start button to be pressed,<br>to continue the marking, | No data                                                                                                                                                                                                                                   | OK → cycle in process<br>[EOT] → last dot marked<br>[ENQ] → back to home position<br>[NAK] [Err1] [Err2] [Err3]<br>→ if an error occurs (see appendix) |
| <b>RESETERROR</b>     | If an error occurs, you need to clear the machine status ( Same as if you press the start button)                                                                                                                                                            | No data                                                                                                                                                                                                                                   | OK                                                                                                                                                     |
| <b>NEWFILE</b>        | Create a new file                                                                                                                                                                                                                                            | Marking speed (1 à 9),<br>Fast speed (1 à 9),<br>Crossed zero (0 ou 1),<br>Name of the file (optional )                                                                                                                                   | OK : empty file created<br>BAD ARGUMENT                                                                                                                |
| <b>INSERTTEXTLINE</b> | Add a line to the current file                                                                                                                                                                                                                               | X, Y, Z, W, H ( in 10 <sup>th</sup> of mm)<br>Angle (in hundredth of degrees from -18000 to 18000)<br>radius ( in 10 <sup>th</sup> of mm)<br>Space between chars (from 0 to 10)<br>Force (0 à 9)<br>Quality (1 à 9)<br>Text to be printed | OK<br>BAD ARGUMENT:                                                                                                                                    |

##### •Examples

Select the 'AB12' file without running the cycle

Send the string : **LOADFILE AB12**[CR][LF]  
 in hexadecimal : 4C 4F 41 44 46 49 4C 45 20 41 42 31 31 0D 0A

Select the 'AB12' file and start the cycle

Send the string: **LOADFILE AB12**[CR][LF]**RUN**[CR][LF]  
 in hexadecimal: 4C 4F 41 44 46 49 4C 45 20 41 42 31 31 0D 0A 52 55 4E 0D 0A

Select the 'AB12' file, set the 'OF' variable with '12345' value and start the cycle

Send the string: **LOADFILE AB12**[CR][LF]**SETTEXTVAR OF 12345**[CR][LF]**RUN**[CR][LF]  
 in hexadecimal: 4C 4F 41 44 46 49 4C 45 20 41 42 31 31 0D 0A 53 45 54 54 45 58 54 56 41 52 20 4F 46 20 31 32 33 34 35 0D 0A 52 55 4E 0D 0A

Send a complete marking frame in a 'TEMP' named file and start the cycle

X=10mm, Y=12mm, Char of 5x7mm, Force=5, Quality=double with text=HELLO WORLD

Send the string: **NEWFILE 5 7 0 TEMP**[CR][LF]  
**INSERTTEXTLINE 100 120 0 50 70 0 0 2 5 2 HELLO WORLD** [CR][LF]  
**RUN**[CR][LF]

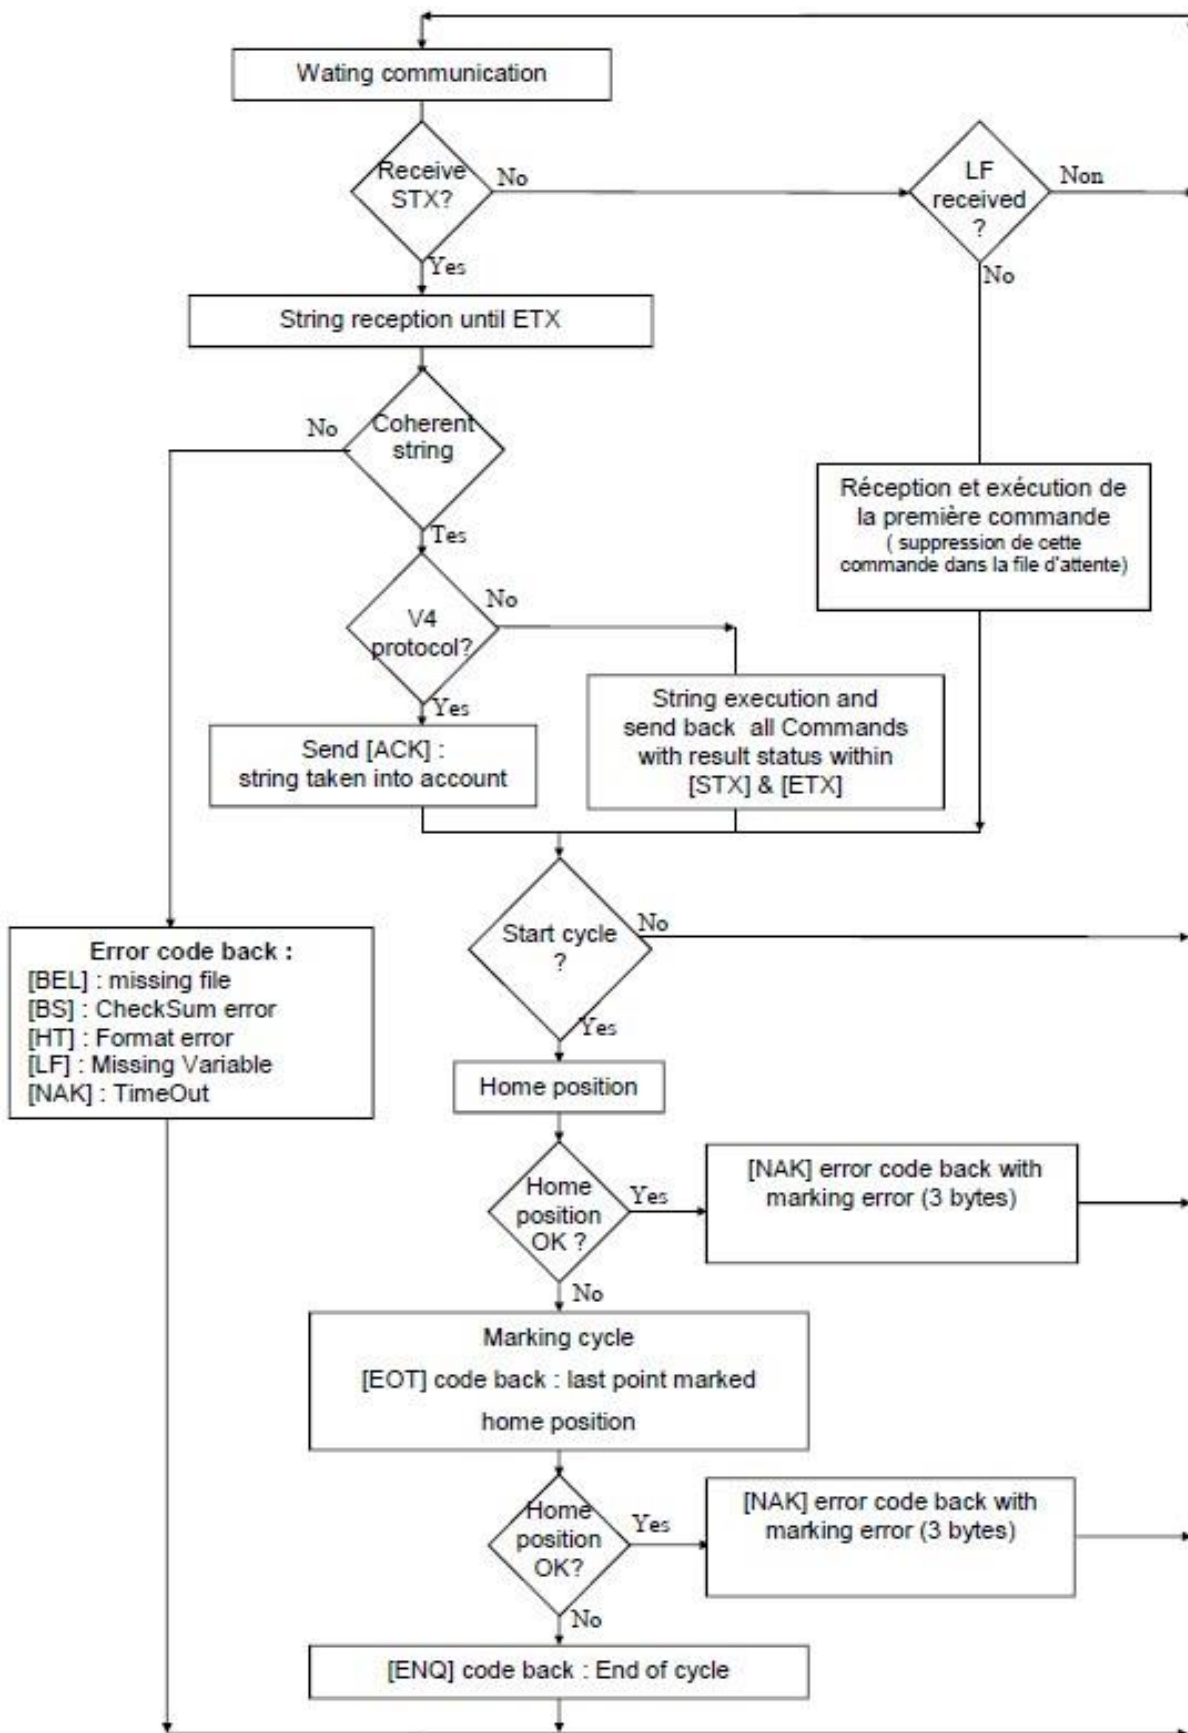

in hexadecimal: 4E 45 57 46 49 4C 45 20 35 20 37 20 30 20 54 45 4D 50 0D 0A

| 08 00 00                  | 08 00 00               | 0000 1000 0000 0000 0000 0000 | Error with external motor                                                                                   |
| 16 00 00                  | 10 00 00               | 0001 0000 0000 0000 0000 0000 | Historic full                                                                                               |
| 32 00 00                  | 20 00 00               | 0010 0000 0000 0000 0000 0000 | Double detected for historique                                                                              |
| 64 00 00                  | 40 00 00               | 0100 0000 0000 0000 0000 0000 | Error : stylus need to be changed                                                                           |
| 128 00 00                 | 80 00 00               | 1000 0000 0000 0000 0000 0000 | Error : stylus as to be changed                                                                             |

Examples :

00 01 00 : Emergency stop activated

00 30 00 ( = 00 10 00 + 00 20 00 ) : Marking is out of bounds for X axis

00 48 00 ( = 00 08 00 + 00 40 00 ) : Error with origin sensing on Y

**Note :** SIC TERMINAL use the decimal display of the ASCII codes .

## f) Description of the serial ports

### • "HOST"

| SUB-D 9Pts female |        |
|-------------------|--------|
| Pin               | RS232  |
| 1                 | NC     |
| 2                 | RX     |
| 3                 | TX     |
| 4                 | NC     |
| 5                 | O Volt |
| 6                 | NC     |
| 7                 | NC     |
| 8                 | NC     |
| 9                 | NC     |

#### Notes :

- This serial port is set at 9600 baud, with 8 data bits, 1 stop bit, and with no parity.
- It is allocated to the loading of the "controller" software and to the saving of the parameter setting files.
- It can also be used for the slave operating mode but it is only in standard type RS232 and the parameters can not be modified.

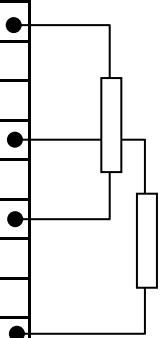

### • "SERIAL"

| SUB-D 9Pts female |        |
|-------------------|--------|
| Pin               | RS232  |
| 1                 | NC     |
| 2                 | RX     |
| 3                 | TX     |
| 4                 | NC     |
| 5                 | O Volt |
| 6                 | NC     |
| 7                 | NC     |
| 8                 | NC     |
| 9                 | NC     |

#### Notes :

- In the standard version, this serial port is set in RS232 but it can also be set in RS422 using the tabs.
- It is strictly usable in *Slave Operating Mode*.
- In order to set the configuration, open the hatch located under the marking controller, which will give you access to the configuration tabs. See diagrams below :

| SUB-D 9Pts female |        |
|-------------------|--------|
| Pin               | RS422  |
| 1                 | RX+ ●  |
| 2                 | NC     |
| 3                 | NC     |
| 4                 | TX- ●  |
| 5                 | O Volt |
| 6                 | RX- ●  |
| 7                 | NC     |
| 8                 | NC     |
| 9                 | TX+ ●  |

For RS422, it is need to add two end line resistances of 120 ohm 1/4W

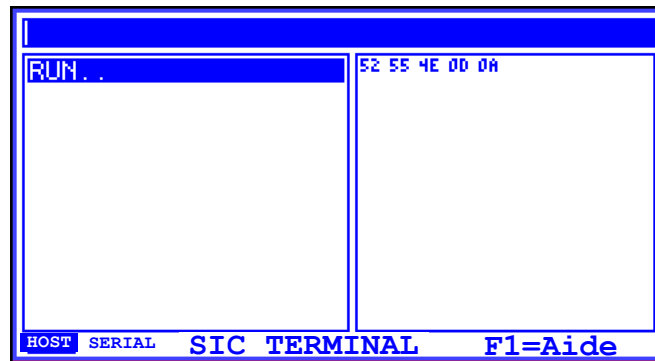

### RS232, RS422 RS485

The SERIAL port can be set to RS232 (default), RS422 or RS485.  
See SERIAL COMMUNICATION PARAMETER under E10 v5 software.

### g) RS232 test

You can manually test the RS232 of the e6. Goes to menu ? → SIC TERMINAL, Follow screen will appear :

This function let you test serial communication with the e6. You can send string and see received string

- The edition filed is the string to be sent
- the left list correspond to the last received string
- the right text is the selected line of the left list RECEIVED DATA ARE IN HEXADECIMAL

- : Select a line within the received string list
- Send string to the Selectionned RS port
- Add check sum
- Clear the received string
- SERIAL Port <-> HOST Port
- or return to previus SCREEN

## 2 - TOR InputS / Outputs

### a) Cabling

| N° | Name                 | function                                                      |
|----|----------------------|---------------------------------------------------------------|
| 1  | Input 1 (NC)         | Power off                                                     |

| 23 | output 2 dry contact      | " impulsion at the last printed dot, time 250ms " |
| 24 | output 3 dry contact      | " Default "                                       |
| 25 | output 3 dry contact      | " Default "                                       |
| 26 |                           |                                                   |
| 27 | output 4                  | « Pause »                                         |
| 28 | Ground 24 V               | Ground 24V                                        |
| 29 | 24V                       | +24V (500 mA max)                                 |
| 30 |                           |                                                   |
| 31 |                           |                                                   |
| 32 | output 8 dry contact (NC) | " open when stylus need to be changed "           |
| 33 | output 8 dry contact (NC) | " open when stylus need to be changed "           |
| 34 |                           |                                                   |
| 35 |                           |                                                   |
| 36 |                           |                                                   |
| 37 |                           |                                                   |

### b) Electric limit

#### •Dry contact output (relays)

- Switched current max.. = 1 A.
- Switched voltage max. = 48 V.
- Contact resistance < 100 mΩ.

#### •Output 4 (transistor)

*This transistor pluh the pin #27 to the ground ( pin #28).*

- Switched current max. = 1 A.
- Switched voltage max. = 30 V.

#### •Inputs

Activating an input by grounding its pin (#1 to #8) to pin #9 or #10

### c) File selection

The selection of some of the controller input/output board inputs allows automatic opening of pre-recorded marking files (up to 63 files).

A maximum of 6 inputs are assigned to this task (inputs 3 to 8). Each "input" may be open (state "0") or closed (state "1") by dry contacts (\*) to form a binary code.

(\*) A dry contact can be assimilated to an open or closed switch connecting contact 9 or 10 (input common) to one of the inputs, without any voltage.

This binary chain, converted into decimal values, corresponds to a number varying from 0 to 63 (maximum). This is the value which will be associated with a marking file.

You will be able to assign a marking file to each binary input combination.

**Input assignment code**

Input 8, Input, ... Input 1

0 = Open,  
1 = Close

**Assigned file name**

Keys   for choosing binary combination

Key  = (+) or indicating list of files or , or key  to obtain file

Key  to validate

FILE SELECTION

| Code     | File |
|----------|------|
| 00000100 | ---  |
| 00001000 |      |
| 00001100 |      |
| 00010000 |      |
| 00010100 |      |
| 00011000 |      |
| 00011100 |      |

Immediat load OFF

### Example for the assignment code

| Input | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |  | Binary code | Decimal value |
|-------|---|---|---|---|---|---|---|---|--|-------------|---------------|
| State | 1 | 0 | 1 | 0 | 1 | 0 | 0 | 0 |  | 10101000    | 168           |

### Remarks:

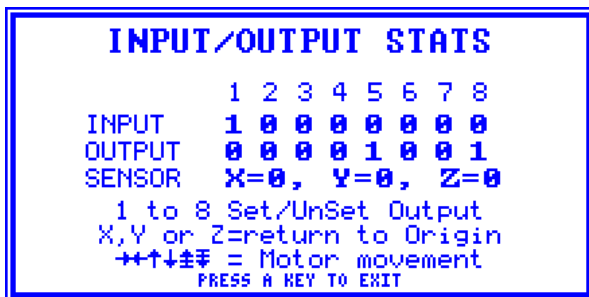

- The state of the inputs is scanned only when the cycle starts. Be sure to set the state of the inputs before activating the cycle start.
- Some accessories or options use inputs. These inputs will no longer be available for selecting the file which is limited.

### **d) Input/Output test**

You can manually test the input/output stats of the e6. Goes to menu :

Follow screen will appear :

INPUT line gives the input stats of the e6 :  
1 active (contact is close with commun)  
0 inactive (contact is open)

OUTPUT line let you set the stats: use keys 1 to 8.

F10 key will display on live IO status in marking mode screen

F11 key will cancel previous display.

### **e) Operating timing diagram**

During the marking cycle the controller outputs are activated as follows:

|                              |                                                                                                                                                                                                                         |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Start of cycle :             | The « contoller ready » output changes to the inactive state<br>The current cycle output changes to the active state                                                                                                    |
| Last marked point:           | The last marked point output changes to the active state                                                                                                                                                                |
| Return to origin             | The last marked point output changes to the inactive state<br>The current cycle output changes to the inactive state<br>The « Controller ready » output changes to the active state                                     |
| Error during cycle:          | The « Fault » output changes to the active state<br>The current cycle output changes to the inactive state<br>The last marked point output changes to the active state<br>The ready controller output remains inactive. |
| Validation of pause message: | The machine returns to the origin then,<br>The current cycle output changes to the inactive state                                                                                                                       |

The « controller ready » output changes to the active state  
The « Fault » output changes to the active state

Pause during cycle:

The « Pause » output changes to the active state

Validation of pause message: The « Pause » output changes to the inactive state

In a standard configuration

Output « Cycle in progress »

is active when the contact is close between bornes 20 et 21

Output « End of marking »

is active when the contact is close between bornes 22 et 23

Output « default »

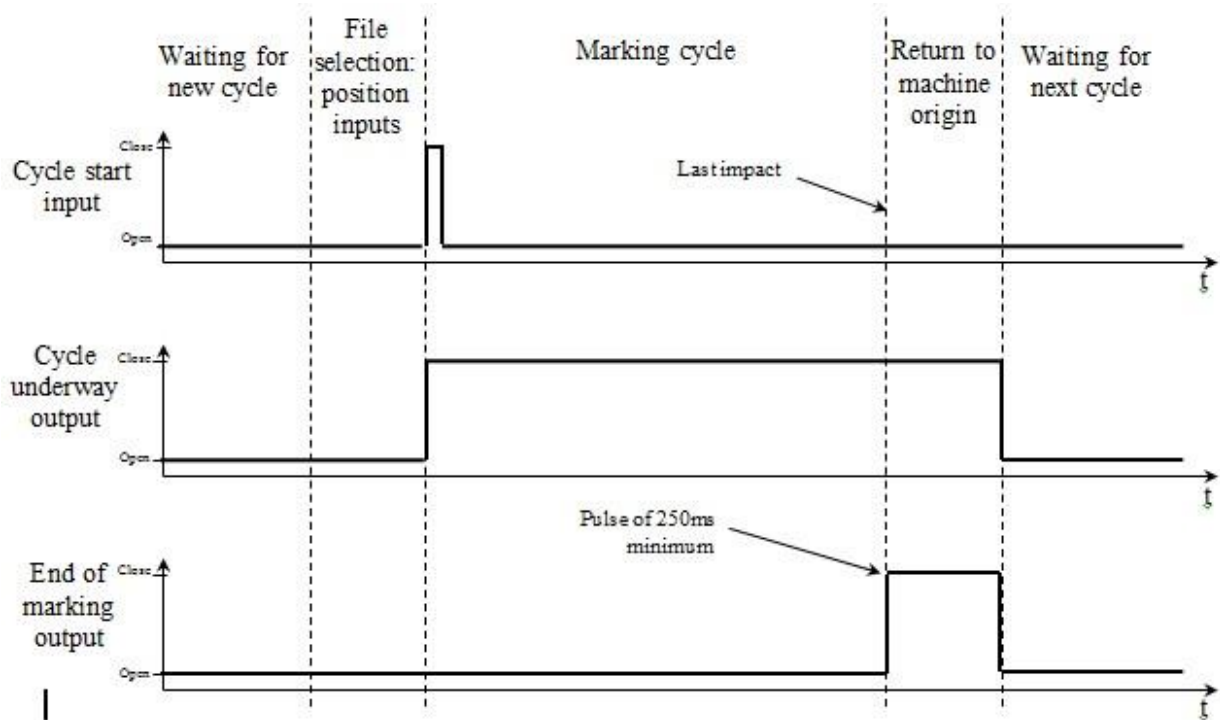

is active when the contact is close between bornes 24 et 25

Output « pause »

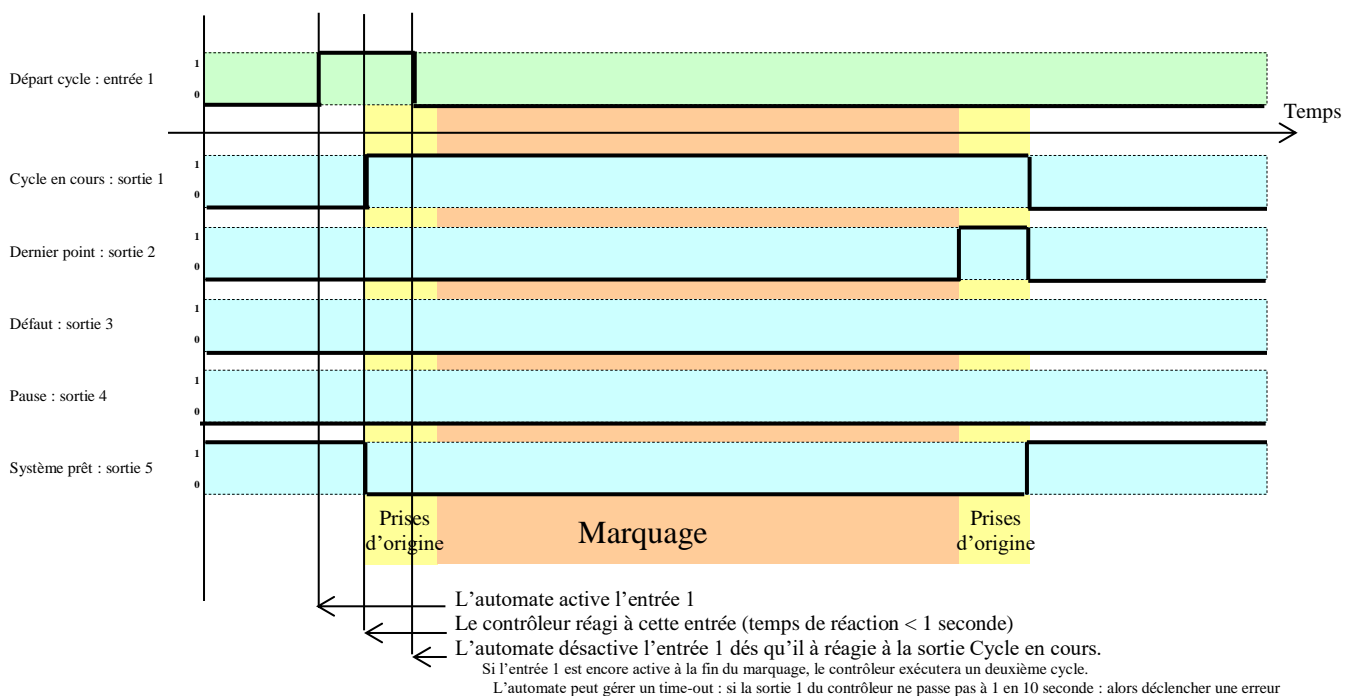

is active when the contact is close between bornes 27 et 29

Output « e6 Ready »

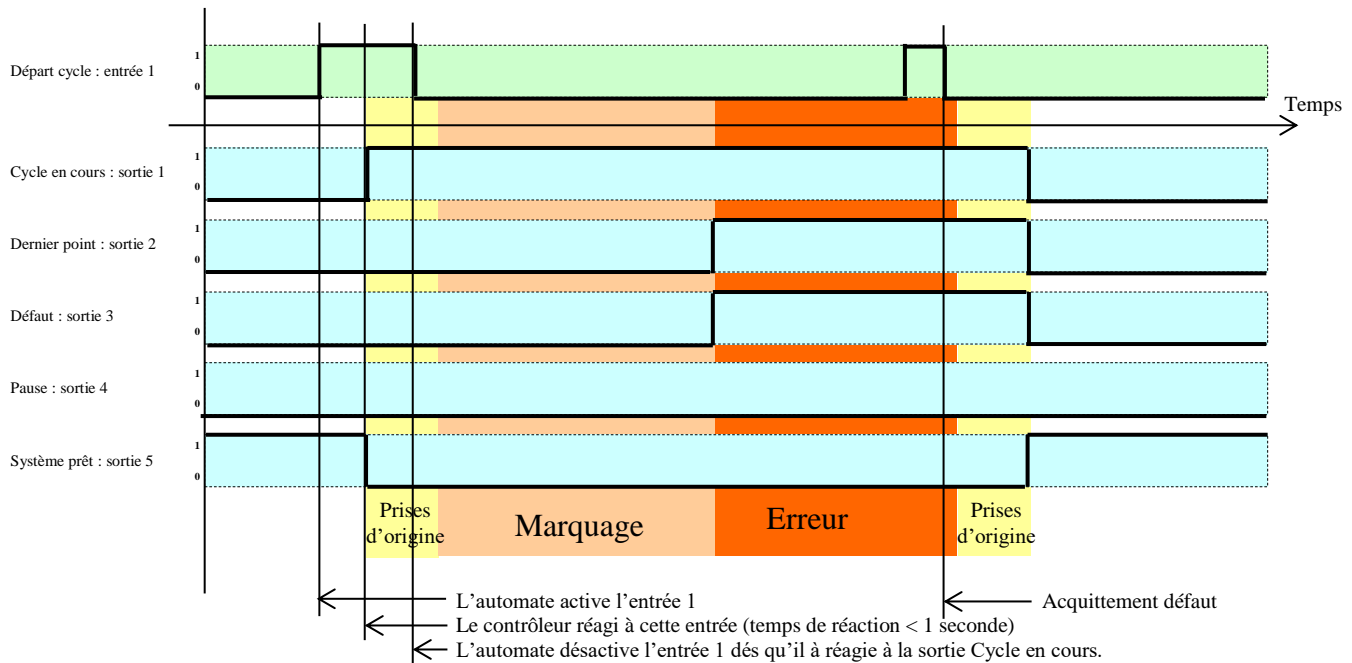

is active when the contact is close between bornes 15 et 16

### Synoptique : cas d'un marquage sans erreur

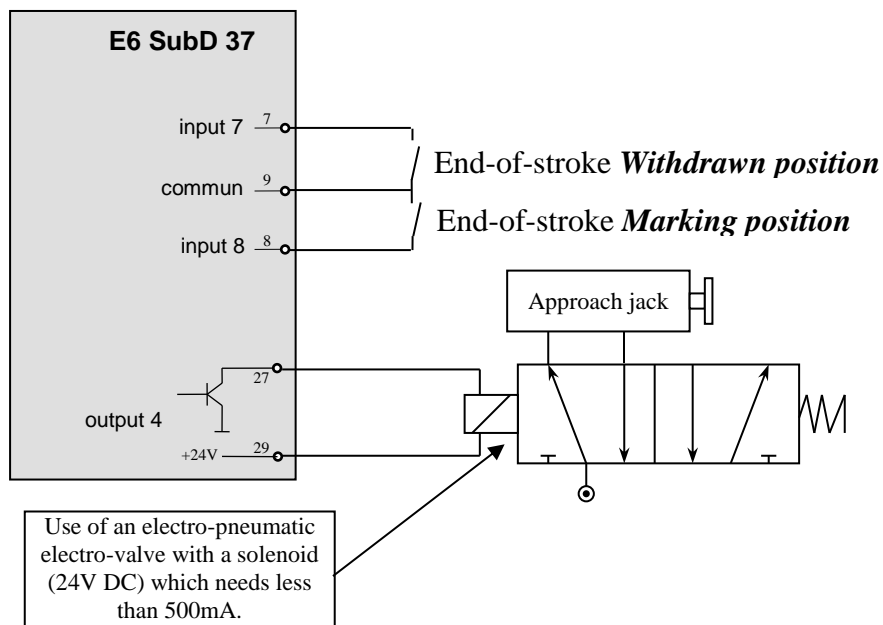

## Synoptique : cas d'un marquage avec erreur

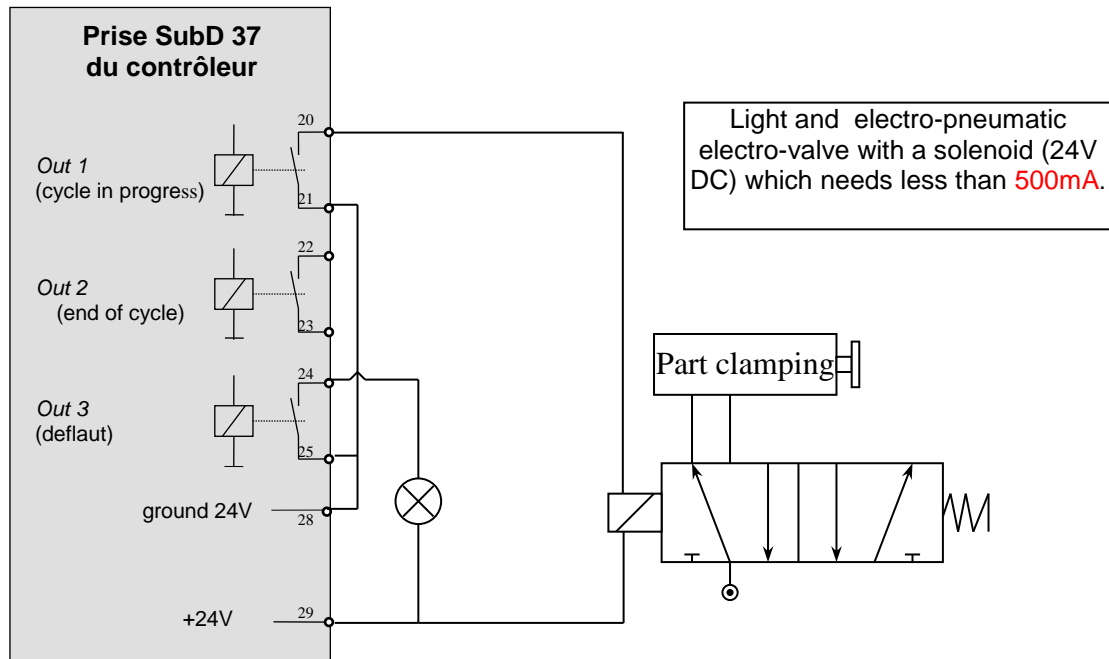

## Cabling examples

### •Wiring of the pneumatic Z-axis

### •Use of the I/O with the clamping of a part being marked, and default announced by a light.

In the case of I/O communication with a PLC, the inputs of the controller must be dry contacts with no tension.

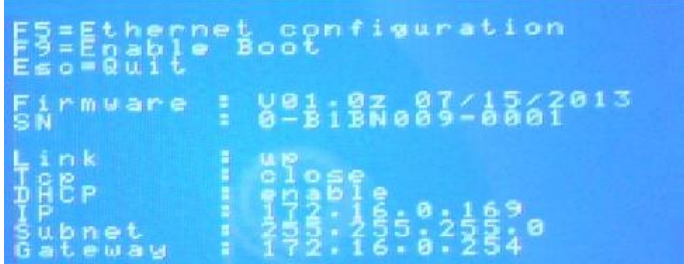

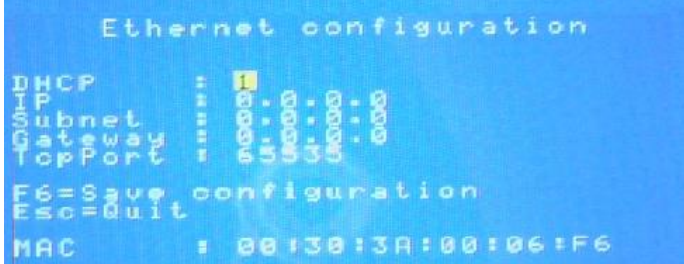

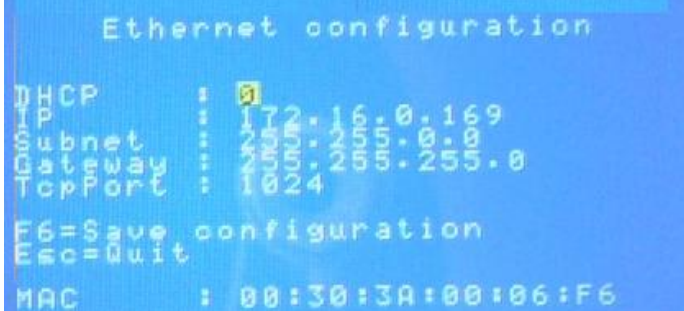

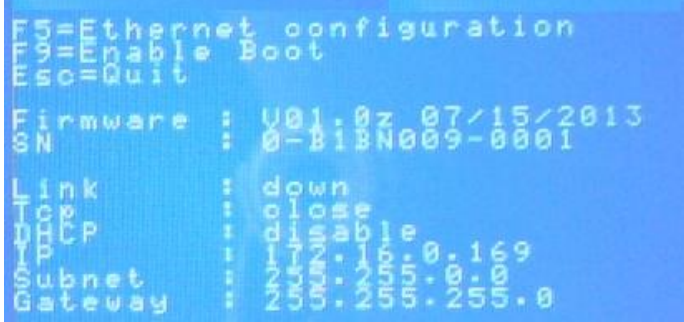

To avoid any trouble, we recommend that you interface the static relay output by an external mechanical relay.

### III - CONFIGURATION OF THE COMMUNICATION PORT (OPTIONAL BOARDS):

**Important note:** The use of an optional communication boards on the e10 controller disable the RS232 port.

#### a) Ethernet

Power up the E10 controller (switch 15, figure 1) by pressing on F1 at the same time

|                                                                                     |                                                                                                                                  |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
|    | <p>Press F12</p> <p>If the communication card is not present or not detected,<br/>F12 = Communication board is not displayed</p> |
|   | <p>Press F5</p>                                                                                                                  |
|  | <p>DHCP: 1, Address defined by the server<br/>TcpPort must be: 65535</p> <p>DHCP: 0, Manual configuration</p>                    |
|  | <p>Enter a compatible network address</p> <p>Press F6 to save</p>                                                                |
|  | <p>Press Esc to exit</p>                                                                                                         |

### **b) Profibus**

- Switch the controller in Boot mode: press F1 at the beginning of the boot:

```

BOOT SIC_E10 V01.2 01/27/2015

Library: V01.3b 04/30/2014
SN: 0-566532-0135

Esc=Quit, +/-=Set luminosity
Waiting connection...

F12=Communication board
```

- Press F12 to enter on the COM board boot mode:

```
F5=Profibus configuration
F9=Enable Boot
Esc=Quit

Firmware : V01.1 01/27/2015
SN : 0-751711-0016
```

- Press F5 to enter on the Profibus configuration:

```
Profibus configuration
Gateway found:
AdIC-PBL-SIC U7.82[34] (c) dA = Sc
ript(C:985/1984,V:751/1400)=Sc
B-Gateway Author="Dirk Doers
heler" Version="U 1.07" Date=2
6.03.2015 SN=35257499 ID=3 EN:
001200003ADC00020A07DE000000K
onfigmode...

FieldBus ID :

F6=Save configuration
Esc=Quit
```

**From now you can change the fieldbus ID:**

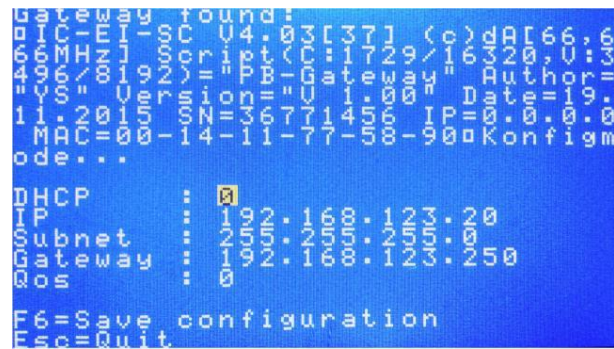

1. Enter a number from 1 to 126
2. Press F6 to save and ESC two time to reboot the controller

### **c) Profinet and Ethernet/IP**

- Switch the controller in Boot mode: press F1 at the beginning of the boot:
- Press F12 to enter on the COM board boot mode:
- Press F5 to enter on the Profinet or Etehernet/IP configuration menu and check the IP address (Change it if necessary). It will be used further to set up the connection.

Example:

```
Gatew... found:
d1C-El-S... 4.03[37] (c) dAl66.6

Qos : 0

F6=Save configuration
Esc=Quit
```

|         |                                                                                                                                                |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------|
| DHCP    | 0: The controller IP address is set manually (DHCP disabled)<br>1: The controller IP address will be set by the DHCP controller (DHCP enabled) |
| IP      | The IP address of the controller                                                                                                               |
| Subnet  | The IP subnet to be used in conjunction with the IP address                                                                                    |
| Gateway | The IP address of the gateway                                                                                                                  |
| Qos     | 0: No quality of service used<br>1: Quality of service used                                                                                    |

***Note: On this screen if “Author= Deutschmann automation...” is displayed, it means the board is not ready to work. The SIC script must be loaded.***

- Press “F6” to save a modification.
- Press “ESC” several times to quit and reboot the controller.

## IV - FIELDBUS PROTOCOLS

The marking system can be controlled by Profibus, Profinet or Ethernet/IP protocol with a bus width of 16 bytes (standard).

The protocols cannot send the complete data string at once to the E10 controller, as the bus width is restricted to 16 bytes.

Please refer to the previous pages for the commands list.

### ***a) Prerequisite***

The PROFIBUS module requires the e10v6.1.001 (2-3 axes), e10v6.0.011 (4 axes) software or later versions installed on the controller.

The PROFINET and ETHERNET/IP modules require the e10v6.1.002 (2-3 axes), e10v6.0.012 (4 axes) software or later versions installed on the controller.

### ***b) Integration***

These modules are integrated as COM boards inside the e10 controller.

- **PROFIBUS :**

Standard PROFIBUS SUBD 9 connector

- **PROFINET and Etehrnet/IP:**

Standard PROFINET or Ethernet/IP connector

### **c) Procedure required**

1. Separate your data string into parts of 15 bytes each
2. Put a sequential counting byte (hex (01)-(02)-(03)- etc.) at the beginning of each sequence, append the 15 bytes of data.
3. On the last sequence use hex (FF) as the first byte.
4. If there is only one sequence, use hex (FF).
5. Any sequences sent and not completely filled with data have to be completed using zeroes to fill the 16 bytes (see example 2).

Important note: To be active, two identical and successive sending must be separate by a neutral sending (null string). The system read only sendings after an I/O's state change.

### **d) Example 1**

Select file 'SIC', no checksum and do not start the marking process:

Send this string: [STX] [NUL] [SOH] SIC [ETX]

First sequence is the only one.

Hex values: **FF 02 00 01 53 49 43 03 00 00 00 00 00 00 00 00**

**Note : the selected file must be in the controller.**

### **e) Example 2**

Send a complete string including start command for the marking sequence and select speed 9:

send this string: [STX] [NUL] [LF] 9 [VT] +0100+0500000002002000000005N1 SICTST [VT]  
+0100+1000000003003000000005N2 MARKING [ACK] [ETX]

Hex values:

Seq. 1 : **01 02 00 0A 39 0B 2B 30 31 30 30 2B 30 35 30 30**

Seq. 2 : **02 30 30 30 30 30 32 30 30 32 30 30 30 30 30 30**

Seq. 3 : **03 30 30 35 4E 31 53 49 43 54 53 54 0B 2B 30 31**

Seq. 4 : **04 30 30 2B 31 30 30 30 30 30 30 30 33 30 30**

Seq. 5 : **05 33 30 30 30 30 30 30 30 30 35 4E 32 4D 41 52**

Seq. 6 : **FF 4B 49 4E 47 06 03 00 00 00 00 00 00 00 00 00**

It is possible to create a data string made up of up to 8 single packets.

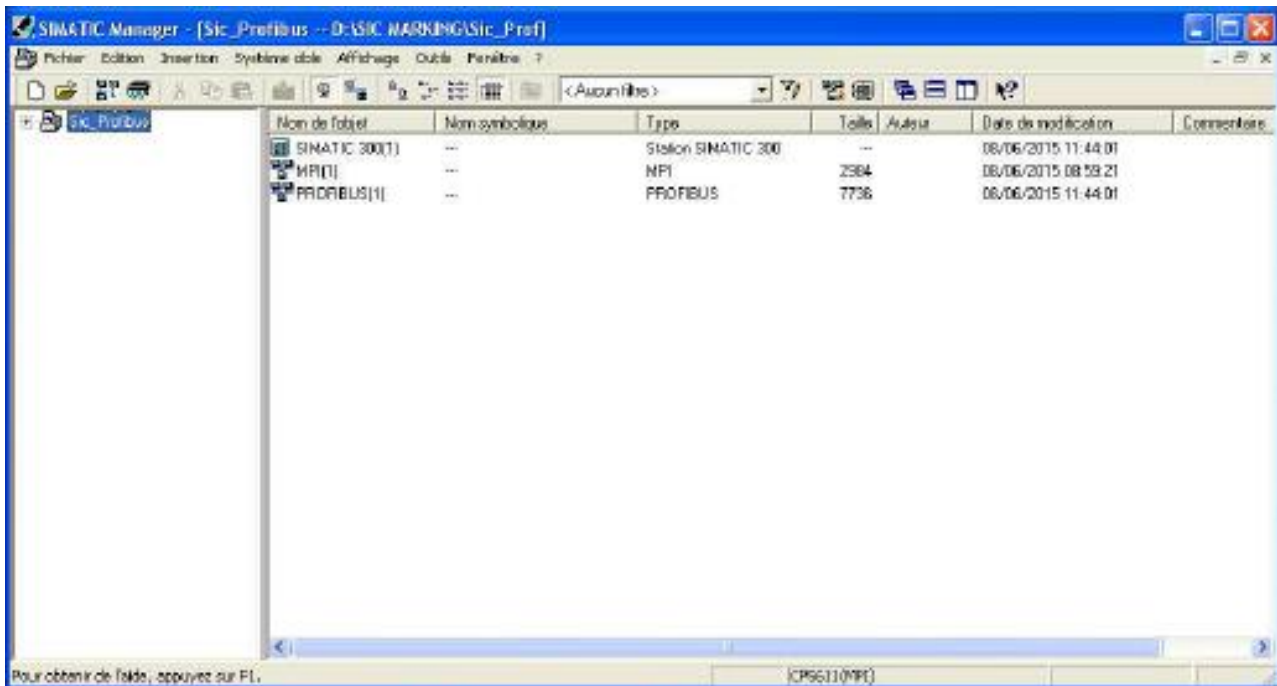

After the receipt of one packet the Gateway returns the packet number followed by the answer of the command (limited to 16 byte).

### f) Example 3,

#### - with SIEMENS S700 PLC

- Open Siemens Step 7 software.
- Open the file needed with the file menu.

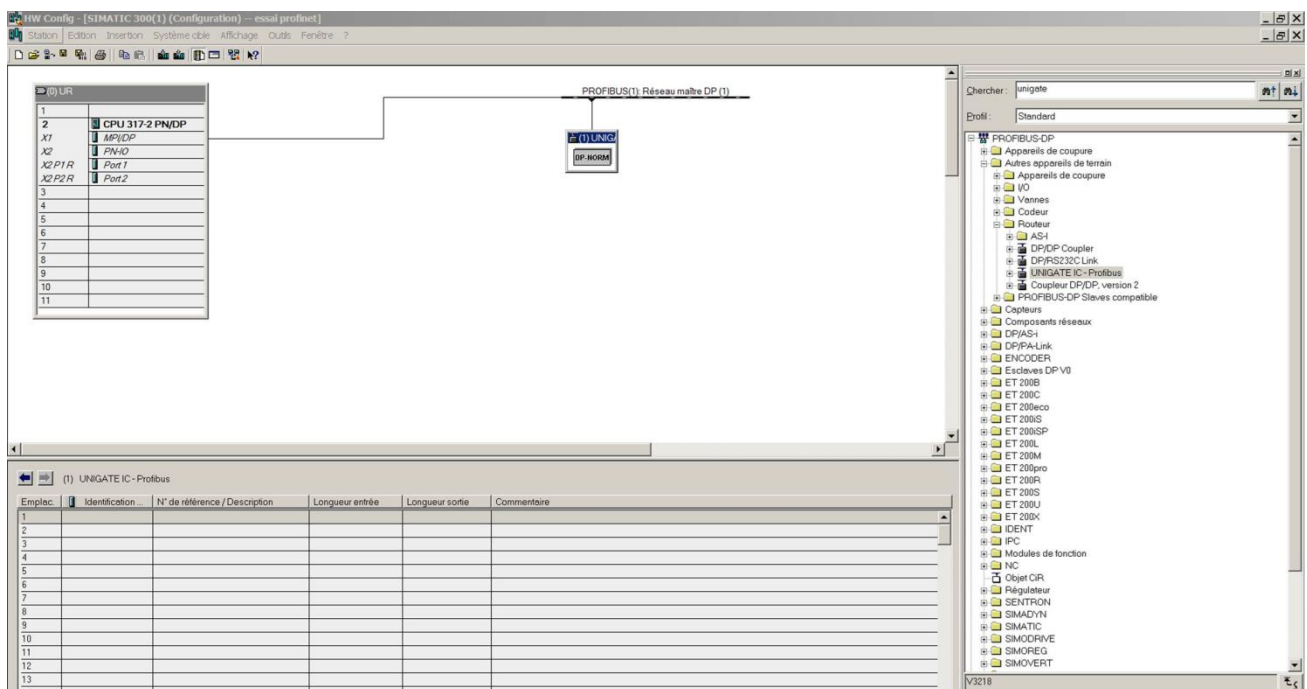

This file is on the e10 CD in the **Profibus\sic\_prof** folder.

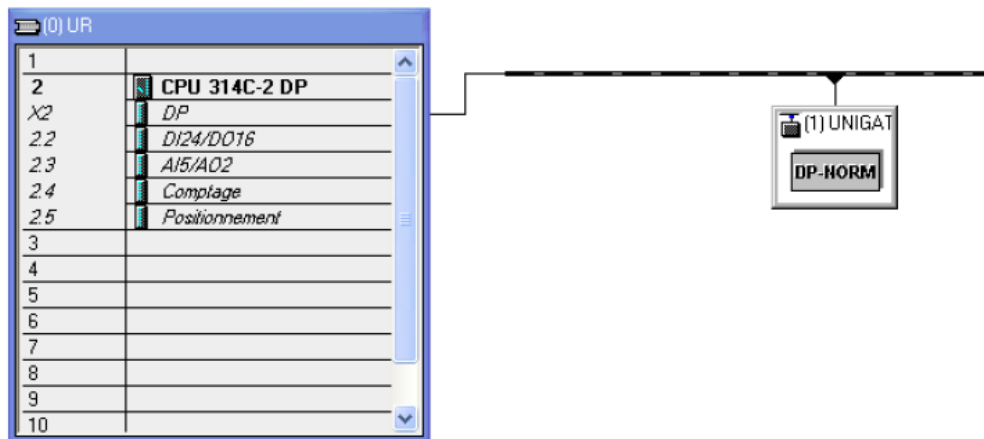

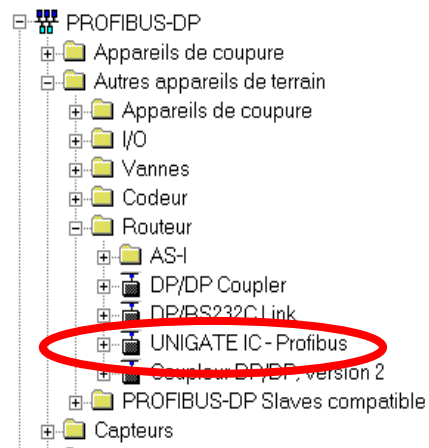

Hardware configuration:

Double click on the hardware element to open the configuration window (HW config).

#### - PROFIBUS : (Example SIMATIC)

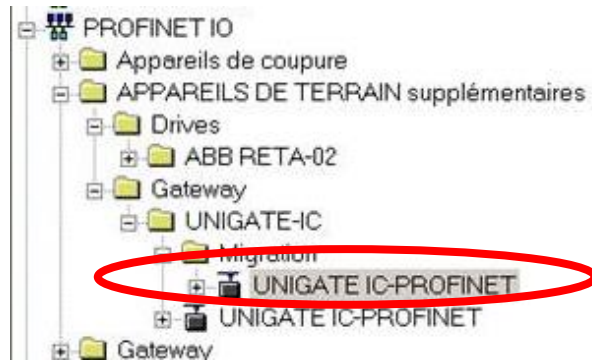

- The file “UGIC3218.gsd” is available in the SIC files directory.

## - PROFINET : (Example SIMATIC)

- The file “GSDML-V2.3-Deutschmann-UNIGATE-IC-PN-20150504-110100” is available in the SIC files directory.
- Take UNIGATE from the HW config Library.

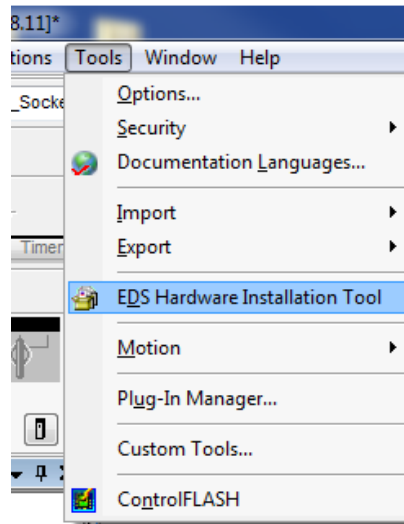

- Integrate the GSDML on the I/O PROFINET network previously created.

## - **ETHERNET/IP : (Example RSLogix 5000)**

In order to address properly in an EtherNet/IP network, an eds file is provided with the EtherNet/IP card (« sicmarking.eds » available in the SIC files directory). This file contains the information so that a programmable logic controller (PLC) can send information to the e10 controller and read back information from it.

The eds file contains the definition of the e10 controller. So before adding an e10 controller in the network, the e10 definition must be extracted from the eds file and added to the list of device already recognized by the development environment. The following steps are done in the Logix Designer Studio 5000.

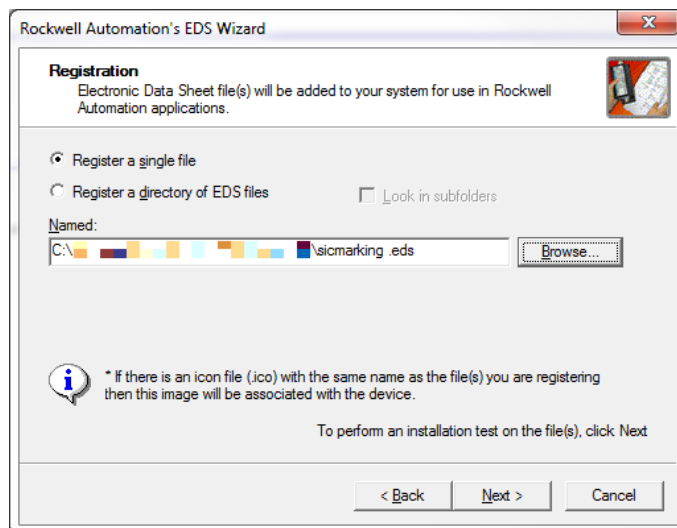

From the “Tools” menu, select the “EDS Hardware Installation Tool” option :

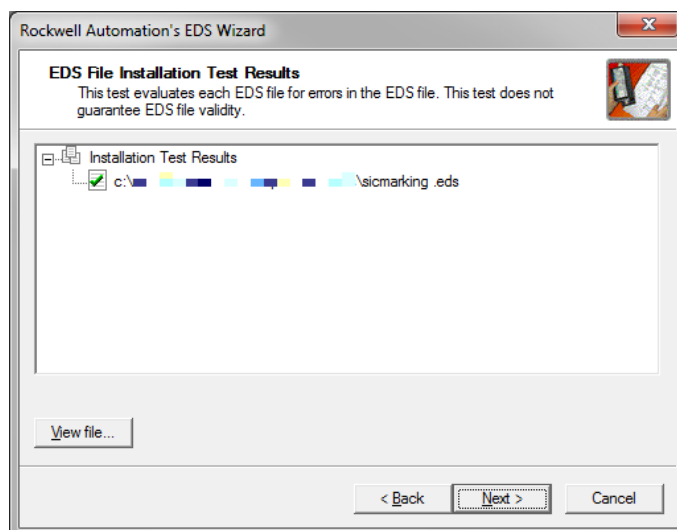

From the Rockwell Automation EDS Wizard, select the “Register an EDS file” option and click the “Next” button :

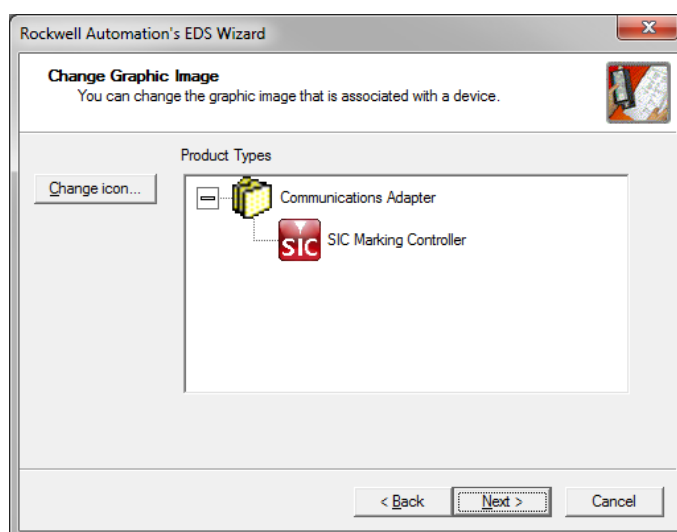

In the next step, select the “Register a single” option. Either enter directly the path of the provided eds file, or click the “Browse...” to select the file. Once the file is entered in the “Named” text box, click the “Next” button again :

The following step in the Rockwell Automation EDS wizard is a confirmation page to ensure that you have selected the appropriate file. If you are satisfied with your choice, click the “Next” button to proceed with the extraction of the information about the e10 controller :

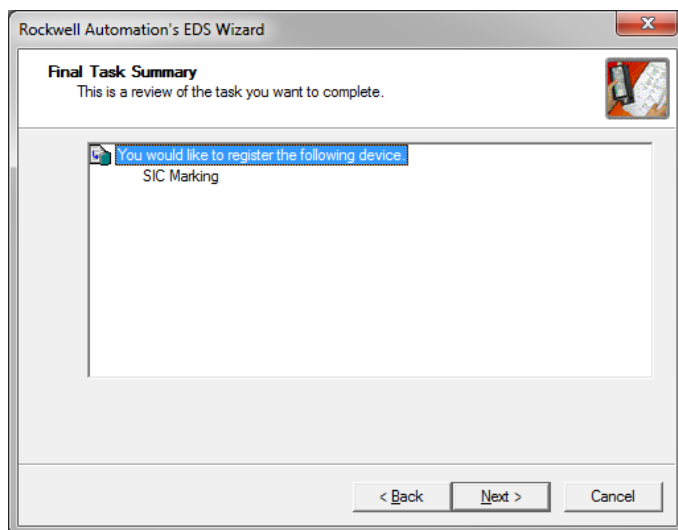

When the eds file is read by the wizard, the definition of the SIC Marking controller will be presented to the user in the next wizard's page. Click the “Next” button to confirm the product type extraction :

The last step is to insert the device definition contained in the eds file and to add the device in the database. Again click the “Next” button to proceed with the insertion of the SIC Marking e10 controller in the database :

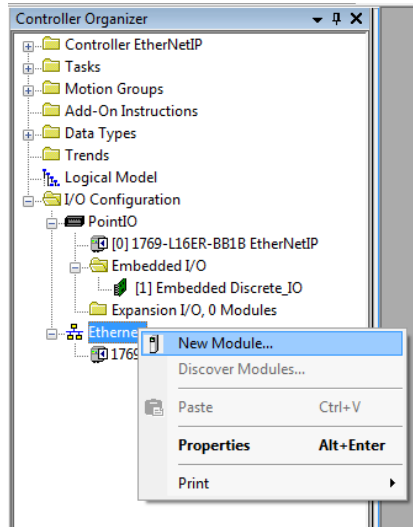

This final wizard page is to confirm the SIC Marking e10 controller definition was properly extracted from the EDS file and added to the Logix Designed devices definition. Click the “Finish” button to complete the process :

## **Adding the e10 controller to the Network :**

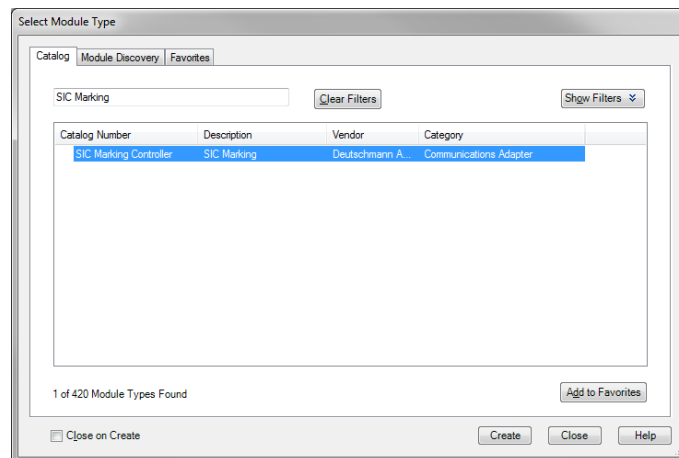

With a SIC Marking e10 controller with an EtherNet/IP card installed and the product definition added to the Logix Designer, you can now proceed with adding an e10 controller in your industrial network. The following steps are done the Logix Designer.

In the Controller Organizer view, do a right-click on the “Ethernet” branch. Select the “New Module...” to add a new device to your network.

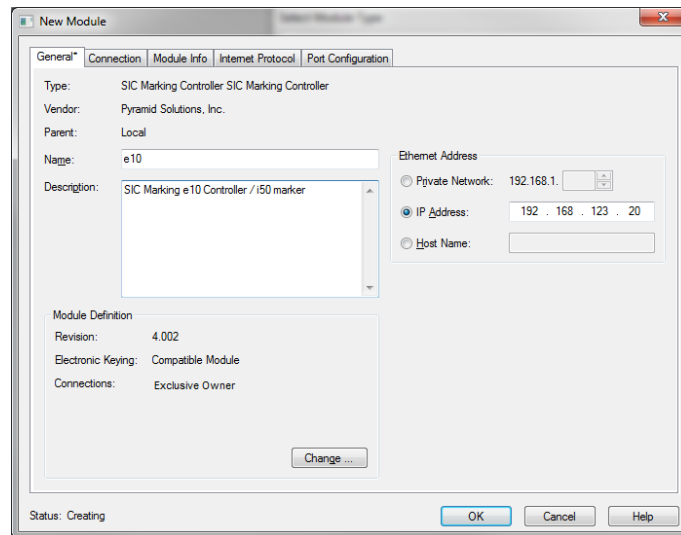

You must now select the SIC Marking device from the catalog. The easiest way is to perform a search is by searching for “SIC Marking” as the keyword. If the eds file was properly loaded (see previous section) you should be able to see the definition.

Click on the “Create” button to add a new e10 controller in your network :

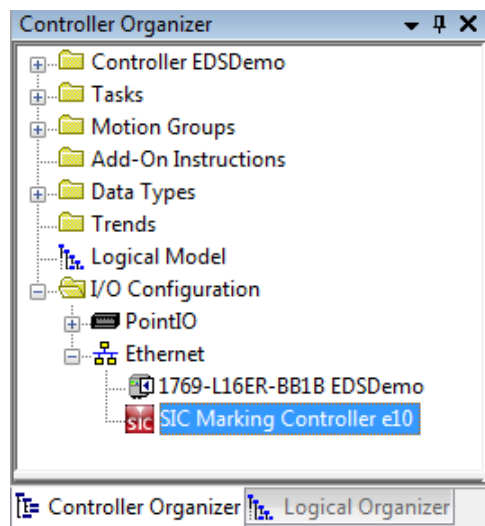

Give your new e10 controller in your network a meaningful name in the “Name” textbox. The other critical information is the Ethernet address. The information you enter in the Ethernet address must match what you have entered in the controller itself (first section of this document).

Click the “Ok” button when the appropriate information is entered :

Your new e10 controller will now appear in the Controller Organizer window of the Logix Designer. Your device is now part of your industrial network and you are now ready to send information and directive to it to perform your various marking needs :

**NOTE:** Depending on the version of your RSLogix Software, the connection tab may also present the option "Use Unicast Connection over EtherNet/IP. Please make sure to disable this option as the device does not support it.
